And especially my wife, Rhonda Simpson, who puts up with my Pentel obsession, and for her editorial help.

I decided to compile this book to help put together the history of Pentel Mechanical Pencils and help in identifying some of these rare pencils. There are so many Pentel pencils that I did not even realize existed when I started this project in 2022. The data in this book is written to the best of my knowledge at the time I wrote the page. Some items may be revised over time as more data turns up, or as other enthusiasts contribute to the book.

There are a lot of limited-edition pencils that are not listed here, but I do not plan to add those, as other than the P200 pencils, I do not have a good list of those limited editions. The Pop'npop and Olympic pencils are included here since they cross models.

Since the last 2025 edition, there are 6 new models added to the front, and 9 models to the Branded pencils. There are a bunch of new pictures as well. I have added an article on the pre-barcode Tags and Stickers to the Appendix B.

I make no claim on the images that I sourced from websites or catalogs. These are just used to help identify these pencils. If you see your images here, and would like me to remove them, please contact me at the email below. Or, if you would like to give me specific permission to use them, please contact me and let me know how you would like the images to be credited.

Here is some terminology that I use in this book that helps to differentiate between different pencils that are either similar or very different model numbers.

Generations: Not covered extensively in this book, these are minor incremental changes, such as the change from a metal lead reservoir to plastic reservoir or other small changes. The QE415 change in the text on the side of the pencil is an example of a Generation change.

Version: I define this as a major change to a pencil, but still recognizable as the same model: the addition of the rubber grip to the PD345 is a good example of a Version change.

Type: This is a major difference within a model number. Arguably these should be different models, but Pentel assigned the same model number to them. The complete design change of the P245 is one example.

It has been brought to my attention that one of the Tags at the bottom of the page needs an explanation. This is the “FF-#####” tag. This stands for Form Factor, and indicates pencils that have a common design, even if they do not have a common model number. For example, the AM113 has a tag of #FF-A105, meaning that it is the same design or “Form Factor” as the A105 pencil.

Book versions are based on the latest catalog that is included in this book, plus a sub number. For instance, this book is the 2nd published iteration of the Book based on the inclusion of 2026 catalogs.

Pentel Pencils Identification Book

100 Pencil

Image Source https://twitter.com/offu_5050/status/1843958772894679242

Size 0.9
Base Colors A Beige / B Red / C Blue / D Green / E Brown
Years Available 1960 to mid-60's
Mfg Country Japan
Dist Country Japan
Dimensions Overall (Long / Short Version): 151.6 / 145.4mm
Reservoir Cap: 10.3mm
Body (Long / Short Version): 126.2 / 120.0mm
Tip: 15.1mm

Text reads:

"PENTEL" Pencil ぺんてる 100A
"PENTEL" Pencil ぺんてる 100 B
"PENTEL" Pencil ぺんてる 100 C
"PENTEL" Pencil ぺんてる 100 D
"PENTEL" Pencil ぺんてる 100 E

Released under the brand name, "PENTEL", this is the first mechanical pencil produced by the Japanese Stationery Co., Ltd.

In the picture above, the 100A is longer than the other models. I am not sure if this is a first generation or a later generation. The shorter version has a space between the 100 and the color code. Some of these pencils came with a removable clip (not shown).

See article "Possible Release Order of Early Pentel Stick Pencils" in Appendix B.

Pentel Pencils Identification Book

350 Pencil

Image Source Jimmy Simpson

Size 0.5
Base Colors D Green / E Brown
Years Available Early to mid-60's
Mfg Country Japan
Dist Country Japan
Dimensions Overall: 138.6mm / 136.6mm
Reservoir Cap: 9.9mm
Body: 110.4mm
Tip: 18.3mm / 16.3mm

Text reads:

PENTEL 350D 0.5mm MADE IN JAPAN

PENTEL 350E 0.5mm MADE IN JAPAN

This model appears to be an early version of the Sharp 5 (PS-350), and at various times, these were available in a 2mm and a 4mm tip.

Early versions of this pencil have a split tip (which you can see in the bottom picture), where the metal tip screws into a second metal tip on the pencil.

I believe this tip may be the origin of the semi-step tip used on lots of later 60's & 70's pencils, such as the Graphs (including the PG#), the P200/P320 & the Executives (P505, ML series & S5# series) pencils.

You will often see the Green 350D listed as a 3500 on auction sites, by unobservant sellers. Sometimes they are listed as 850 or 8500 pencils online, due to the less than stellar foil stamping that would sometimes "fill in" the loops in the 3, making them look like an 8. The easiest way to tell if it is a 350 or an 850 is the clip on the 350 is not removable, but the 850 is.

See article "Possible Release Order of Early Pentel Stick Pencils" in Appendix B.

Pentel Pencils Identification Book

850 Pencil

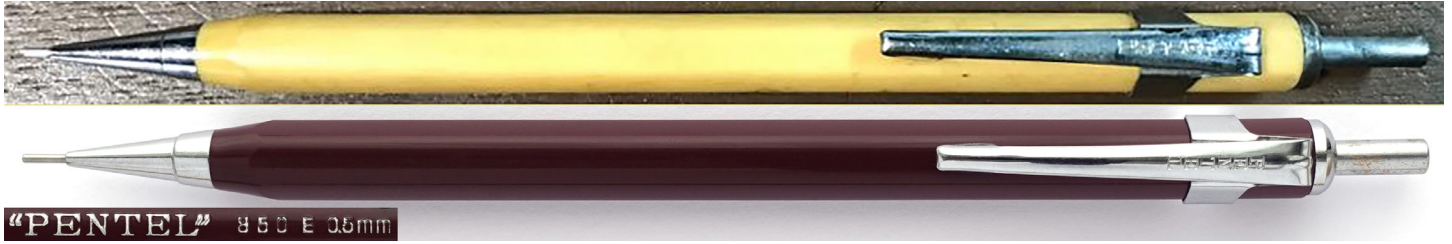

Image Source <https://jp.mercari.com/item/m31824617418> [1] | Gunther [2]

Size	0.5
Base Colors	A Beige / E Brown
Years Available	1962 to early-60's
Mfg Country	Japan
Dist Country	Japan
Dimensions	Overall: 138.0mm Reservoir Cap: 9.0mm Body: 110.0mm Tip: 19.0mm

Text reads:

"PENTEL" 850 A 0.5mm

"PENTEL" 850 E 0.5mm

Due to the text on the side of the pencil, the removable clip, and the fact that Pentel introduced the 0.5mm lead in 1962, I believe that this was Pentel's first 0.5mm pencil.

One thing that strikes me about this pencil is that it is one of only two early 1960's pencils (model 100 being the other) that I see with what appears to be a removable clip, which is a different style from later clips used on mid-60's pencils.

See article "Possible Release Order of Early Pentel Stick Pencils" in Appendix B.

Pentel Pencils Identification Book

A127 Il Matito "The Pencil"

Image Source <https://www.ebay.com/itm/377083345493>

Size	0.7
Base Colors	Brown
Years Available	1985 or 1995
Mfg Country	Japan
Dist Country	Italy
Dimensions	Overall: 141.2mm Eraser Cap: 16.3mm Reservoir: 3.5mm Body: 99.3mm Tip: 22.1mm

This pencil does not have a model number on the pencil.

"Il Matito" is Italian for "The Pencil".

Based on the 5J Date Code, this was probably released in 1985 or 1995.

AYP301 Aya Mechanical Pencil

Image Source [unknown]

Size 0.5
Base Colors Silver & Gold thread
Years Available 1990
Mfg Country Japan
Dist Country Japan
Price Tags ¥30000

The symbol on the front of the band translates to Aya.

To my knowledge, this was the most expensive pencil that Pentel ever released.

There is another ballpoint pen that, instead of being marked with the Aya symbol around the band, commemorates the opening of Pentel HQ on 90.11.21.

Pentel Pencils Identification Book

BS5 Black Sharp 5 Pencil

Image Source Jimmy Simpson

Size	0.5
Base Colors	Black
Years Available	1970 to Mid-70's
Mfg Country	Japan
Dist Country	Japan
Price Tags	¥500
Dimensions	Overall: 141mm Eraser Cap: 11mm Body: 68mm Grip: 44mm Tip: 18mm

The BS5 pencil appears to be a precursor to the PS535, and uses the same body/grip, but has a fixed tip. It was originally shown in the Pentel Japan 1970 One-Sheet as the Black Five.

Based on the ML5 and the ML51 being Silver and Black bodies, we originally designated this as the S551, since it appears to be a Black body version of the S55. Since then, we have discovered photos of a box of these pencils, and it was positively identified as the BS-5. But the way that the S55 was originally designated S-55, this is now listed as the BS5.

Text reads:

PENTEL GRAPH PENCIL MADE IN JAPAN 6
PENTEL GRAPH PENCIL JAPAN B1
HB Pentel GRAPH PENCIL JAPAN E-7
PENTEL GRAPH PENCIL MADE IN JAPAN #

I believe the 6, D-3 & E-7 are mold marks.

Early version of the Graph series of pencils. I believe the Red and Green pencils above are the earliest versions, due to the single digit mold mark. The top black pencil would be next with the B-1 mold mark.

The third pencil is included due to the lead hardness printed on it, and to show the new Pentel logo printed in the cutout. It should probably be the final version of the pencil, coming out in late-1970 or later. Also, it has the highest mold mark, starting with E-#.

Winner of the 1966 Good Design Award.

Pentel Pencils Identification Book

Graph II Mechanical Pencil

Image Source Jimmy Simpson

Size	0.5
Base Colors	Black Body, Yellow Band
Years Available	1970 to 1971
Mfg Country	Japan
Dist Country	Japan
Dimensions	Overall: 148.6mm Reservoir Cap: 7.8mm Extender: 18.0mm Ring: 8.1mm Body: 94.4mm Tip: 20.3mm

This pencil is the immediate precursor to the PG5.

The only real external difference between the Graph II and the PG5, is the old style font for the Pentel in the cutout behind the grip, no printing on the side on the Graph II. The major differences are primarily internal, with the area marked "Connector" above being a molded piece of the body on the Graph II and a separate white piece (with a sticker listing the lead sizes attached) on the PG5. A second major difference is that on the Graph II, the lead reservoir screws in from the front (with the larger thread, seen above), and on the PG5, it drops in through the back, and is held in place by the chrome tip [See the article "Graph II vs PG5" in Appendix B].

Graph For Film Mechanical Pencil

Image Source Jimmy Simpson

Size	0.5
Base Colors	Black with White Ring
Years Available	1970
Mfg Country	Japan
Dist Country	Japan
Dimensions	Overall: 148.6mm Reservoir Cap: 7.8mm Extender: 18.0mm Ring: 8.1mm Body: 94.4mm Tip: 20.3mm

The design of this pencil is based on the Graph II with the single piece Body & Connector.

There is a Pentel For Film Set that comes with this pencil, 3 sets of Film Lead (P1, P2 & P3), a Faber-Castell Filmar for Drafting eraser, an instruction sheet and a plastic folio.

For Film lead goes from hardness P1, the softest, to P5, the hardest (P4 & P5 were only available in 0.9mm), and was used for writing on mylar sheets (film) over plans or maps, so you could "mark them up" without damaging the original.

Pentel Pencils Identification Book

Hi Black ML5 Pencil

Image Source Jimmy Simpson

Size	0.5
Base Colors	Black
Years Available	1978
Mfg Country	Japan
Dist Country	Japan
Price Tags	¥700
Dimensions	Overall: 130mm Eraser Cap: 10mm Body: 71mm Grip: 34mm Tip: 15mm

This pencil was released to promote a darker versions of lead, the C-405 Hi Black lead. It apparently shipped with B lead, instead of the normal HB.

This version of the Hi Black is the same form factor as the ML5.

The Date Code is stamped on the lead reservoir in yymmdd format. The example I have is 780522.

Pentel Pencils Identification Book

MEC / MEC2-5 Mechanica Pencil

Image Source Jimmy Simpson

Size	MEC 0.3	MEC2-5 0.5
Base Colors	MEC - Red Band	MEC2-5 - Yellow Band
Years Available	MEC 1968 to 2002 MEC2-5 1970 to 2002	
Mfg Country	Japan	
Dist Country	Worldwide	
Price Tags	MEC ¥3000 MEC2-5 Early ¥2000, Later ¥3000	
Dimensions	Overall (Shield retracted/extended): 148.0mm / 149.5mm Plunger: 6.0mm Extender: 6.9mm Hardness Ring: 7.9mm Body: 82.4mm Grip: 30.1mm Shield (Shield retracted/extended): 3.7mm / 16.2mm Tip (Shield retracted/extended): 11.0mm / 0.0mm	

Pentel's flagship drafting pencil, the original Mechanica was the first 0.3mm pencil released by any company.

In general, the grip on the MEC had 12 grid rows with the grooves being inked. The MEC2-5 had 14 rows, not inked.

For both the MEC and the MEC2-5, the designs fall into 3 general periods.

Early Period– 1968 (1970 for the MEC2-5) to around 1972

Grip Text: ↔PENTEL |Y|echanica Ring Text: MADE IN JAPAN

The Late Early period MEC has a thicker text on the grip.

Middle Period – I believe, around 1975 to 1990

Grip Text: Pentel Mechanica 0.3 (or 0.5) Ring Text: JIS S 6013 (♻) Display permission 375127 MADE IN JAPAN

I believe Pentel received their JIS permit in 1975, so I suspect, but cannot say for sure, that the Early Middle pencils did not have the JIS information on the Ring.

Late Period – 1990 to 2002

Grip Text: Pentel Mechanica 0.3 (or 0.5) Ring Text: [none]

Winner of the 1969 Good Design Award and the 1985 Good Design Long Life Design Award.

Pentel Pencils Identification Book

Middle 5 Deluxe (ML5 Deluxe) Mechanical Pencil

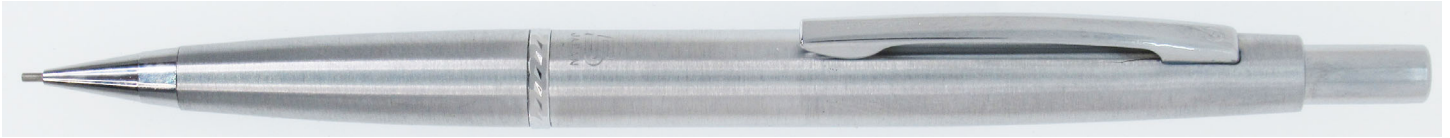

Image Source Jimmy Simpson

Size	0.5
Base Colors	Silver
Years Available	1970 to early-70's
Mfg Country	Japan
Dist Country	Japan
Price Tags	¥1000
Dimensions	Overall: 131.3mm Eraser Cap: 11.4mm Body: 70.0mm Grip: 35.0mm Tip: 14.9mm

This pencil was identified by the translation of the label in a packaged pencil. There was not a model number, just "Middle 5 Deluxe". Middle 5 is what the ML5 is commonly called in Japanese translations.

Pentel Pencils Identification Book

ML3 Sharp "Middle 3" Pencil

Image Source Jimmy Simpson

Size	0.3
Base Colors	A Black / B Red / C Blue
Years Available	1970 to early-70's
Mfg Country	Japan
Dist Country	Japan
Price Tags	¥500
Dimensions	Overall: 130mm Eraser Cap: 10mm Body: 71mm Grip: 34mm Tip: 15mm

I ordered this pencil as a Pentel 3, and I assumed it was a PS513, as that is the only executive style pencil I had found cataloged like this before. But upon receipt, I find that it had a 0.3mm FIXED tip, instead of a Sliding Sleeve tip. The pencil, and the tip, are the same form factor as the ML5 (0.5mm). I find several of these in auctions, now that I know what to look for.

Although related to the ML5 tip, it is the only pencil I have found with the 0.3mm of this style. The only other "Executive" style pencils in 0.3mm, that I know of, are the PS513 and SV, which have completely different style tips.

Pentel Pencils Identification Book

ML5 Sharp "Middle 5" Pencil

Image Source Jimmy Simpson

Size	0.5
Base Colors	Body Early - Brushed Metal / Later - Polished Metal A Black / B Red / C Blue / D Green / F Orange / P Pink / W White
Years Available	Late-60's to early 90's
Mfg Country	Japan
Dist Country	Worldwide
Price Tags	Early ¥500, Late ¥700
Dimensions	Overall: 130mm Eraser Cap: 10mm Body: 71mm Grip: 34mm Tip: 15mm

There have been at least 3 versions of the logo stamped into the body during the time this pencil was in production. The below is my supposition.

- 1st - Pentel over 5 over Japan
- 2nd - Narrow Lined 5 over Japan
- 3rd - 5 over Japan

Late in the US catalog pictures, it appears that they went back to the 1st version.

Base Colors	Black Body Rubber Grips - AD Black / BD Red / CD Blue / DD Green / GD Yellow
Years Available	1984 to early-90's
Mfg Country	Japan
Dist Country	Japan
Price Tags	¥1000
Dimensions	Overall: 135.3mm Eraser Cap: 9.9mm Body: 105.8mm Tip: 19.6mm

The FFF on the Black body stands for "Fits Fingers Finely".

The top (Black Grip) pencil has a matt black tip and smaller text on the side. The Date Code is 9L, which is later than the other 4 pencils I have. I am not sure if this was a special run, or a change in the design (generation) for a general 1990 release, but I doubt it. If it was a general release, it had to be towards the end of the run, or we would see more of these.

The Date Code is ink stamped on the underside of the clip.

Pentel Pencils Identification Book

P203 / P205 / P207 / P209 Sharp Pencil

Image Source Jimmy Simpson

Size	0.3 / 0.5 / 0.7 / 0.9
Base Colors	0.3 E Brown 0.5 A Black / B Burgandy / D Green 0.7 C Blue 0.9 G Yellow
Years Available	P205/7/9 - 1970 to Current P203 - 1976 to Current
Mfg Country	Japan - 1970-Current Brazil - About 2003-Current France - Assembles some Limited Edition pencils
Dist Country	Worldwide
Dimensions	Overall: 143.7mm Eraser Cap: 11.4mm Body: 112.0mm Tip: 20.3mm

I suspect that the 11 rings on the grip of the P200 type pencils is a tribute to it's predecessor pencil, the Pentel 11, and the 2-step tip being a tribute to the 350's tip.

Beginning about 2010, Pentel Japan started releasing Limited Editions of the P200 pencils, primarily the P205. About the same time, Pentel Brazil also began Color Editions of all sizes.

Date Codes may be either stamped (70's-early 80's) on the lead reservoir in yymmdd format or (80's & later) stamped or printed under the band of the clip, in line with the printed text.

Dimensions	Overall: 143.7mm Eraser Cap: 11.4mm Body: 112.0mm Tip: 20.3mm

Supposedly for Pentel's Corporate Accounts, this pencil has gone through changes in the short time it was available. Initially it was released in the same colors as the corresponding P200/P320 pencils, but with gray text and a short carry clip. In 1994, Pentel changed the color scheme and kept that up to the end of production.

The Date Code is stamped under the clip band at the end of the line of text. The early pencils (top 3) have date codes 2E, 2D & 2F, representing April to June 1992. The later pencils have codes 4G, 4G & 0J, representing July 1994 and October 2000.

Base Colors 0.5 A Black / B Red / D Green / E Brown / F Orange / G Yellow
0.7 C Blue
0.9 G Yellow

Years Available 0.5 mid-1970's to 2019
0.7 mid-1970's to 1982
0.9 mid-1970's to 1982

Mfg Country Japan

Dist Country P225A/P227C/P229G Worldwide
P225B/P225D/P225E/P225F/P225G Japan only

Price Tags Early ¥200, Late ¥300

Dimensions Overall: 136.7mm
Eraser Cap: 10.9mm
Body: 107.8mm
Tip: 18.0mm

Mold Marks are on the body, just below the cap. One side says Pentel, the other side says Japan and a number (the mold mark).

Date Codes on early models are stamped on the lead reservoir in a yymmdd format. Later models use the 2 character code, that is lightly stamped into the body, at the end of the text on the side. Of the almost 3 dozen pencils I own, the earliest date I show for one of these is 770626.

Pentel Pencils Identification Book

P245 (Type 1) Bravo Automatic Pencil

Image Source Jimmy Simpson

Size	0.5
Base Colors	A Black / C Blue / D Green / E Brown
Years Available	Mid-70's - 1982 or 1983
Mfg Country	Taiwan
Dist Country	No Text - Japan, Taiwan Text - Worldwide
Dimensions	Overall: 135.3mm Eraser Cap: 9.9mm Body: 105.8mm Tip: 19.6mm

I am not sure why some of these were released with text and some without, although I suspect that the ones with text were for the Export market and the ones without text (but generally with stickers) were for the Taiwanese Market.

Pentel Pencils Identification Book

P245 (Type 2) / P247 Bravo Automatic Pencil

Image Source Jimmy Simpson

Size	0.5 / 0.7
Base Colors	0.5 A Black / S Black Grip (Sky Blue) 0.7 C Blue Grip (Black Body)
Years Available	1983 or 1984 to mid-90's
Mfg Country	Taiwan
Dist Country	Worldwide
Dimensions	Overall (2mm/4mm Tip): 138.3 / 140.3mm Eraser Cap: 8.8mm Body: 109.8mm Tip (2mm/4mm): 18.7 / 20.7mm

Text reads:

0.5mm PENTEL P245 TAIWAN 8
0.5mm PENTEL P245 TAIWAN 2
0.7mm PENTEL P247 TAIWAN 2

Size will change and the 2 and 8 are probably the mold marks.

Originally fitted with a 2mm tip, in the 1994 Catalog, it was advertised with a 4mm tip.

These appear to be renumbered P145 & P147. I do not know for sure which came first, but I suspect the P145 & P147.

Dimensions	Overall: 140.8mm Reservoir Cap: 10.6mm Body: 112.0mm Tip: 18.2mm

It has taken a while to finally identify this pencil, but a photo of a box turned up identifying it as the P305. It is an unusual pencil with the diamond patterned grip, although there is a more modern pencil (P35 Hue) that has a similar, but more 3-D pattern.

Before identifying the model number, this was originally cataloged as Unknown Model 01.

0.3 E Brown
0.5 A Black
0.7 A Black (early) / C Blue
0.9 A Black (early) / G Yellow

Years Available P325 / P327 / P329 - 1970 to about 2007
P323 - 1976 to about 2007

Mfg Country Japan

Dist Country Japan

Price Tags Early ¥300, Late ¥500

Dimensions Overall: 143.7mm
Eraser Cap: 11.4mm
Body: 112.0mm
Tip: 20.3mm

Prior to the 5th Generation (pictured above, with the square stickers - produced in the 80's to end of life), the P325, P327 & P329 pencils were produced without any text on them, and the P327 & P329 were sometimes produced in Black or their normal colors.

The P323 began being produced about 1976, with text printed on the side.

I suspect that the 11 rings on the grip of the P200 type pencils is a tribute to it's predecessor pencil, the Pentel 11, and the 2-step tip being a tribute to the 350's tip.

Pentel Pencils Identification Book

P505 "Shorty" Pencil

Image Source Jimmy Simpson

Size	0.5
Base Colors	A Black / B Red / C Blue
Years Available	Late-60's to early-80's
Mfg Country	Japan
Dist Country	Japan
Price Tags	Early - ¥500 / Late - ¥700
Dimensions	Overall: 116mm Eraser Cap: 13mm Body: 56mm Grip: 34mm Tip: 15mm

This is the "short" version of the standard Pentel 5 Executive pencil.

When looking at these on auction sites, look for the beveled ring between the body and grip (also common to the Middle series). The second thing to look for is the short space between that ring and the bottom of the clip, just enough space for a small triangular sticker (see bottom image above).

Pentel Pencils Identification Book

P515 Sharp L Fashionable Sharp for Women!

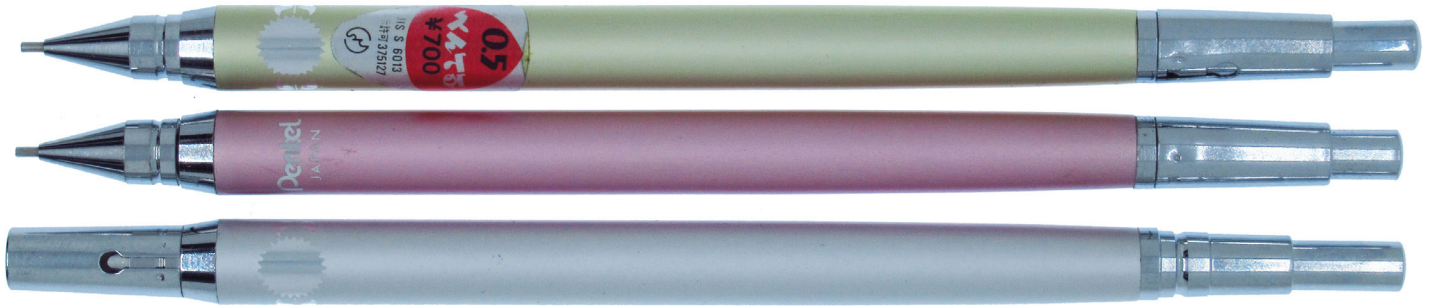

Image Source Jimmy Simpson

Size	0.5
Base Colors	K Pale Green / P Pink / Z Silver
Years Available	Mid-70's
Mfg Country	Japan
Dist Country	Japan
Price Tags	Early - ¥500 Late - ¥700
Dimensions	Overall [Capped / Posted]: 122.6mm / 121.6mm Eraser Cap: 11.5mm End Cap: 13.1mm Body: 83.0mm Tip: 14.0mm Tip Cap: 15.0mm

Like the PMG, this model has a metal sleeve to protect the tip.

Model number and description come from the Pentel shipping box. Date comes from Yahoo Japan listings where some have a small triangular sticker (1975 & before) and some have a large triangular JIS sticker (1976 to early 1980's). Originally, this was just listed as model Sharp L, but on closer examination of the photo of the box, I discovered the P515 model number.

According to the photo of the box, the original price was ¥500, which makes sense with the model number starting with 5, although I have never seen a sticker with that price.

Pentel Pencils Identification Book

P533 Sharp Pencil

Image Source Jimmy Simpson

Size	0.3
Base Colors	A Black
Years Available	Mid-70's to 1976
Mfg Country	Japan
Dist Country	Japan
Price Tags	¥500
Dimensions	Overall: 143.7mm Eraser Cap: 11.4mm Body: 112.0mm Tip: 20.3mm

I saw an explanation online about why the first 0.3mm in this style was released as a P533 rather than a P323. For pencils of this vintage, the first digit indicates a price in yen (¥). The P320 pencils were released at ¥300, but the P533 was released at ¥500, probably due to new expenses. Then in a mid-70's price revision, the P320's had their price raised to ¥500. Since the P533 and the P320's were now the same price, Pentel moved the P533 to the P323 to consolidate the series.

P545 Version 1 "Short" Young Action Sharp Pencil

Image Source Jimmy Simpson

Size	0.5
Base Colors	B Red / D Green / G Yellow Band
Years Available	Early to mid-70's
Mfg Country	Japan
Dist Country	Japan
Price Tags	Early - ¥500 Late - ¥700
Dimensions	Overall: 131mm Eraser Cap: 11mm Body: 63mm Grip: 33mm Ring: 5mm Tip: 20mm

A unique tip marks this pencil. Unusually, this pencil appears to come in two sizes, with one (Version 2) possibly being a second model number (unknown), or an earlier/later version. And to make things more interesting, neither body appears to be used on any pencil, except the P545, so it does not appear to be a case of using other pencil parts.

According to pictures I have found online of the pencils in a Pentel tray, marked P545 (which is how it has been identified), it appears that the shorter Version 1 is definitely a P545, which leaves the question about what the longer pencil is.

The name "Young Action Sharp" or "Young Five" came from a P545 auction on Yahoo Japan. It included a display panel that had the two names on it, along with 3 colors in both sizes.

Pentel Pencils Identification Book

P595 Pop'npop Pencil

Image Source Jimmy Simpson

Size	0.5
Base Colors	C Blue / D Green / G Yellow / P Pink / V Purple
Years Available	Late-70's to early-80's
Mfg Country	Japan
Dist Country	Japan
Price Tags	¥500
Dimensions	Overall: 137.3mm Eraser Cap: 10.9mm Body: 110.3mm Tip: 16.1mm

Says Pop'npop 4 times on each side of the pencil (8 total).

The P575 Crew, the P595 Pop'npop, the Rush on Goal and the PS35/PS45/PS65 all have similar form factors. Both the P595 and Rush on Goal were manufactured around 1979 to 1981 and have a tip with an extended lip that fits into a recess in the body. Again, the lead reservoir appears to be aluminum.

For the longest time I could not figure out where these pencils fit in the Pop'npop family. The colors that I had (Pink, Sky Blue, Purple and Silver) did not fit in with other Pop'npop color sets. Then I noticed that the ring at the top of the silver was yellow, and if I used the rings for the colors, they fit in with most of the other Pop'npop pencils. It also means I am missing only 1 pencil, the green.

The Date Code is stamped on the lead reservoir in yymmdd format. Known Date Codes are between 790724 to 801202.

P805 Sharp Pencil

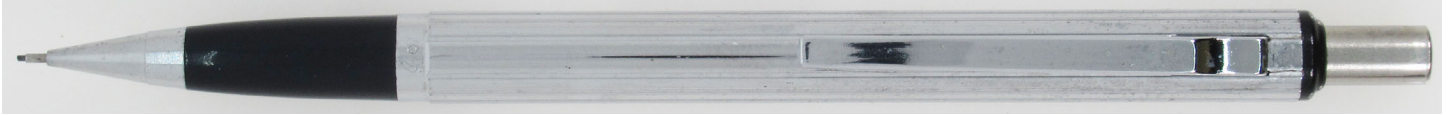

Image Source Jimmy Simpson

Size	0.5
Base Colors	Black / Navy Grip - Silver Body
Years Available	Mid-70's to mid-80's
Mfg Country	Japan
Dist Country	Japan
Price Tags	¥800
Dimensions	Overall: 130mm Eraser Cap: 9.5mm Body: 86.5mm Grip: 19.2mm Tip: 14.8mm

This pencil is a good example of how we investigate and dig to find out model numbers of some of these older pencils. At first this was believed to be a P1075, since aside from the color this is effectively the same pencil as those. But the (actual) P1075s that still had Japanese price stickers were ¥1000, and the price stickers associated with these pencils were ¥800. Looking at other 'P' model pencils and the prices they were released at meant that this pencil should be a P8x5 pencil, and someone on a Yahoo Japan auction called it a P875 in an auction. This made a lot of sense (see the various Kerry's), so for a year or so, in these books, we were calling this a P875.

Now, the holy grail of identification, for unmarked pencils, is either a catalog from that era or a box that clearly identifies the pencil and model. In this case, it was a page from a late-70's Japanese catalog that showed the P1075 and this pencil, identifying it as a P805. This number also makes sense, because in general Pentel increments the series number (second digit from right), from 0 to 9, for instance P205, P215, P225.

Pencils made after 1975 have the 6-digit date code stamped (yyymmdd format) on the lead reservoir. The pencil above has the date code of 771015.

Formerly cataloged as the P875, it has been confirmed to be the P805.

P1005 / P1007 (Version 1) Silver Excalibur Pencil

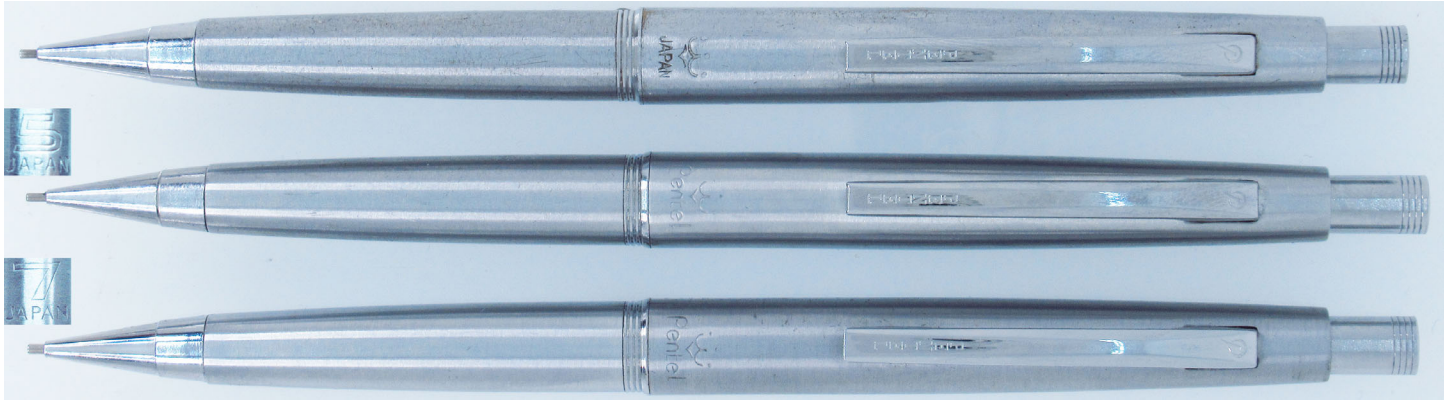

Image Source Jimmy Simpson

Size	0.5 / 0.7
Base Colors	Stainless Steel
Years Available	1971-1974
Mfg Country	Japan
Dist Country	P1005 - Japan P1007 - USA
Price Tags	P1005 - ¥1000 P1007 - \$7.50
Dimensions	Overall: 138.6mm Eraser Cap: 8.1mm Body: 70.2mm Grip: 42.1mm Tip: 18.2mm

I believe the bottom two pencils, in the image above, are the first Excalibur pencils 1971. They are the only pencils that have the thin line Excalibur Crown above the name "Pentel" stamped into the metal of the body. All later pencils have an outline or printed Crown. The bottom pencil came in a set with an R10 Rolling Writer that also had the (outline) Crown above Pentel with the Scepter ring in the middle, not the "gear" or "crown" ring. Also, not being the form factor of the later versions, leans towards it being the first version. It is apparently the only Excalibur of this style, when Pentel decided to split this style off to be the Scepter pencils. All later Excalibur Crown pencils stayed with the SG/SV-style body. This version P1007 was available in a set (EX15/EX12) with a matching R-10 as seen in the 1971 & 1973 US Excalibur brochure.

The top pencil I encountered on Twitter and later acquired. I believe that it may have been an Excalibur prototype. The Crown has a thicker line that probably was decided against due to malforming the body of the pencil/pen. If you check out the back page of the 1973 Excalibur brochure, the R-10 pen has this same logo.

This was formerly cataloged as Unknown Model 11.

See the article "Excalibur Crown Pencils & Family" in Appendix B.

Pentel Pencils Identification Book

P1007 (Version 2)† Silver "Excalibur" Pencil

† (Tentative Designation)

Image Source Jimmy Simpson

Size	0.7
Base Colors	Stainless Steel
Years Available	1975-1977
Mfg Country	Japan
Dist Country	USA
Dimensions	Overall: 132mm Eraser Cap: 8.5mm Body: 63mm Grip & Ring: 48.5mm Tip: 12mm

I received this pencil in an Excalibur set with an R10 Excalibur pen, and I think that this pencil was a stop-gap "Excalibur" pencil.

What I believe happened, is that after the run of the first P1007 pencils was sold out, but before the Version 3 were released, Pentel of America still needed to sell some Excalibur sets. Knowing that Version 3 would be an SG-style, they had these made from SV bodies, but with 0.7mm mechanicals and tip, plus the "7" stamped onto the body.

Check out the SG7 Version 2 for more information on why I believe this is the case.

Previously cataloged as Unknown Model 10 and SG37 (based on the common attribution of the SV/SV5). Also sometimes seen as an SV7 (same reason as the SG37).

See the article "Excalibur Crown Pencils & Family" in Appendix B.

Pentel Pencils Identification Book

P1007 (Version 3) / PX7-20 Silver Excalibur Pencil

Image Source Jimmy Simpson

Size	0.7
Base Colors	Stainless Steel
Years Available	1977 to Late-80's
Mfg Country	Japan
Dist Country	Worldwide
Dimensions	Overall: 132mm Eraser Cap: 8.5mm Body: 63mm Grip & Ring: 48.5mm Tip: 12mm

When this series of Excaliburs was released by Pentel HQ, Pentel of America decided to keep the same model number that they had been selling the silver Excalibur under. But other countries in the world appear to have gone with the same model number format that was used for the PX7-21. In this case, this pencil was sold as PX7-20. This new information about the PX7-20 is from a 1978 Pentel UK Christmas catalog.

It was available with the matching R10/RX20 in the Excalibur gift set, EX-12 (US)/EX-20 (UK & other countries).

The P1007/PX7-20 is the 0.7mm version of the PX20 (0.5mm) that was only available in Japan.

See the article "Excalibur Crown Pencils & Family" in Appendix B.

Pentel Pencils Identification Book

P1025 Sharp 5 W-Knock for Young Pencil

Image Source Jimmy Simpson

Size	0.5
Base Colors	White w/ Black grip
Years Available	Early-70's
Mfg Country	Japan
Dist Country	Japan
Price Tags	¥1000
Dimensions	Overall (retracted/extended): 140.3mm / 138.8mm Eraser Cap (retracted/extended): 14.2mm / 8.5 mm Body: 70.9mm Grip: 40.0mm Tip (retracted/extended): 15.2mm / 19.4mm

For a long time, US collectors simply referred to the P1025 pencil just as W-Knock but recently it has been identified by auctions of sets of these in the shipping box.

Per a Reddit user, "I don't know any Korean, but I know about W and double in Japanese, so here it is in the hope that it might help: AFAIK Japanese people read the letter 'double-u' and 'double' the same (as 'da-bu-ru') because the 'u' at the end is silent (or just makes the ending 'u' sound a bit longer). So, in some cases the letter 'W' is used instead of writing the word 'double'."

This is a very intricate pencil, and operates with 7 floating pieces surrounding the lead reservoir, making it more complicated than I have seen on any other Pentel pencil.

This was Pentel's first doubleknock.

Originally referred to in earlier books as Unknown Model 05.

Primary of several pencils (P1135, P1135N, P2135, Q535) that bear the Kerry name.

The P1035A Black Kerry is a match for the R1000 Excalibur Rolling Writer Pen (US) / RX30 Excalibur Roll-Alloy Pen (Japan). In the US, it was available with the matching R1000 in the Excalibur Gift Set RX1000 in the early-80's.

Intended by Pentel as "a pencil to be used as a fountain pen", they were also referred to as mannenCIL, coming from the fact that fountain pens are called 万年筆 (Man-nen-hitsu) in Japan, where 万年 means 10,000 years, and 筆 means brush/pen. As the original capped design came from copying capped fountain pen designs, it was also called 万年CIL (Man-nen-CIL), with the CIL coming from the last 3 letters of the English word "pencil" - 10,000 year pencil! These pencils were also nicknamed Kelly, pronouncing "carry" the way Japanese speakers do when saying English words. When Pentel decided to drop the 5 to replace it with the name users preferred, they went with "Kerry".

Pentel Pencils Identification Book

P1075 "Iris" Sharp Pencil

Image Source Jimmy Simpson

Size	0.5
Base Colors	A Black / B Red / C Blue / D Green / F Orange
Years Available	1976 to late-70's
Mfg Country	Japan
Dist Country	Japan
Price Tags	¥1000
Dimensions	Overall: 130mm Eraser Cap: 9.5mm Body: 86.5mm Grip: 19.2mm Tip: 14.8mm

Fortunately for us, this pencil contains the model number on the ring between the body and the grip, so we did not have to do any research to find out what it is. Unfortunately, the other pencil that looks very much like it, minus the color stripes did not have the model number. But the P1075 has ¥1000 price stickers on it, but some examples of the other pencil have an ¥800 sticker. This and a Yahoo Auction led us to believe for a while that that other pencils was a P875, but recently a late 1970's catalog page came to light with the model number P805 on it. That page also gave this pencil it's name of "Iris".

Pencils made after 1975 have the 6-digit date code stamped (yyymmdd format) on the lead reservoir. The above pencils are dated between 760709 and 780807.

P1085 Stainless Steel Pencil

Image Source Jimmy Simpson

Size	0.5
Base Colors	Stainless Steel
Years Available	1976 to early-80's
Mfg Country	Taiwan
Dist Country	Japan
Price Tags	¥1000
Dimensions	Overall: 130.4mm Eraser Cap: 9.9mm Body: 105.6mm Tip: 14.9mm

I believe that this pencil was manufactured in Taiwan, which explains the different style sticker, which translates to "18-8 Steel", which is a stainless steel with 18% chromium and 8% nickel.

Pentel Pencils Identification Book

P1135 Sharp Kerry Pencil

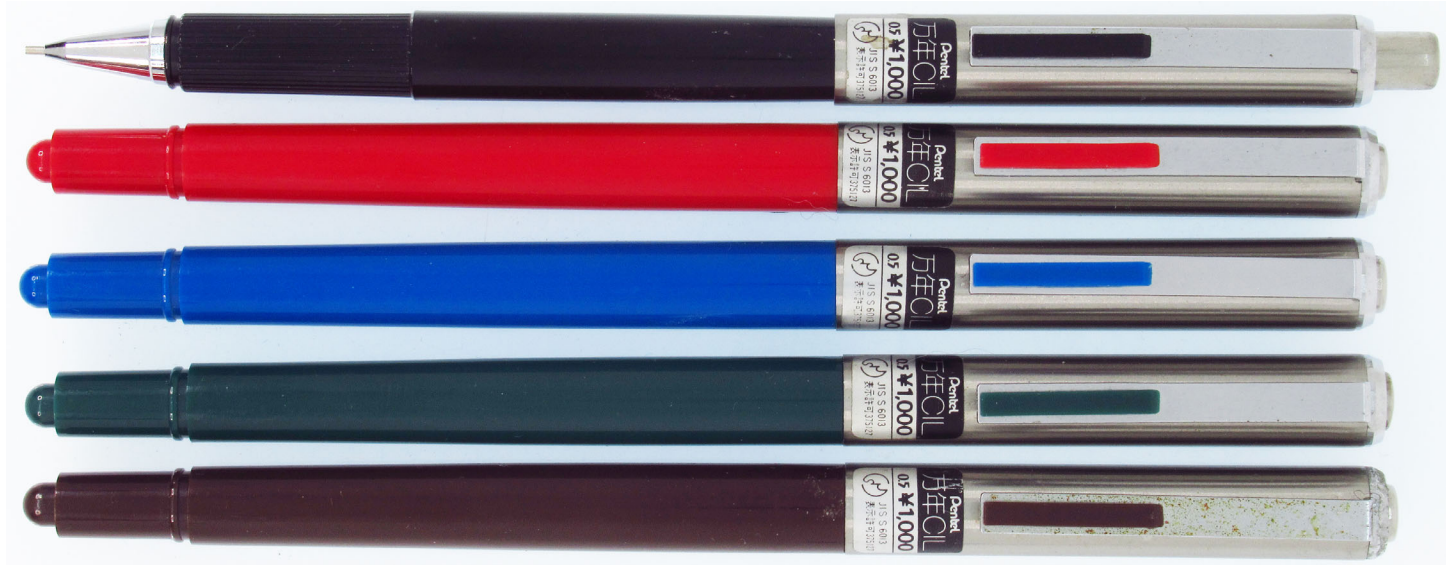

Image Source Jimmy Simpson

Size	0.5
Base Colors	A Black / B Red / C Blue / D Green / E Brown / W White
Years Available	1979 to early-80's
Mfg Country	Japan
Dist Country	Worldwide
Price Tags	¥1000
Dimensions	Overall [Capped / Posted / No Cap]: 137.8mm / 142.7mm / 122.1mm Cap [Capped / Posted]: 54.9mm / 60.9mm Clicker: 2.9mm Extender: 13.6mm Body: 91.1mm Tip: 14.5mm

Following on the success of the P1035 Kerry, Pentel released the P1135. This was also referred to as the mannenCIL (see sticker in picture above), coming from the fact that fountain pens are called 万年筆 (Man-nen-hitsu) in Japan, where 万年 means 10,000 years, and 筆 means brush/pen. As the original capped design came from copying capped fountain pen designs, it was also called 万年CIL (Man-nen-CIL), with the CIL coming from the last 3 letters of the English word "pencil" - 10,000 year pencil!

There is a shorter version of these pencils, the P1135N, that I believe was released to match the size of the capped RK10 Rolling Writer Pens in the box set.

The Date Code is stamped in yymmdd format on the inner reservoir. Date Codes on my P1135's range from 781203 to 800515.

P1135N Sharp Kerry Pencil

Image Source Jimmy Simpson

Size	0.5
Base Colors	A Black / B Red / C Blue / D Green / E Brown / W White
Years Available	1979 to early-80's
Mfg Country	Japan
Dist Country	Japan
Price Tags	¥1000
Dimensions	Overall [Capped / Posted / No Cap]: 129.2mm / 134.1mm / 113.5mm Cap [Capped / Posted]: 54.9mm / 60.9mm Clicker: 2.9mm Extender: 13.6mm Body: 82.5mm Tip: 14.5mm

The P1135N is a match for the RK10 Rolling Writer Pens in matching colors. It was available with the matching RK10 in the Roller Pen Set PRSK10.

The "N" version of the P1135 is about 8.6mm shorter in the body than the regular P1135.

I suspect that this version was made to match the size of the RK10 Rolling Writer when it is capped, so that they would look the same size when sold in a set. When posted, the RK10 is the same size as the P1135.

Following on the success of the P1035 Kerry, Pentel released the P1135. This was also referred to as the mannenCIL, coming from the fact that fountain pens are called 万年筆 (Man-nen-hitsu) in Japan, where 万年 means 10,000 years, and 筆 means brush/pen. As the original capped design came from copying capped fountain pen designs, it was also called 万年CIL (Man-nen-CIL), with the CIL coming from the last 3 letters of the English word "pencil" - 10,000 year pencil!

The Date Code is stamped in yymmdd format on the inner reservoir. The Date Code on my P1135N range is 820615.

Size	0.5
Base Colors	Gold color Stainless Steel Cap
Years Available	Early-80's
Mfg Country	Japan
Dist Country	Worldwide
Price Tags	¥2000
Dimensions	Overall [Capped / Posted / No Cap]: 137.8mm / 142.7mm / 122.1mm Cap [Capped / Posted]: 54.9mm / 60.9mm Clicker: 2.9mm Extender: 13.6mm Body: 91.1mm Tip: 14.5mm

Higher end version of the P1135.

Following on the success of the P1035 Kerry, Pentel released the P1135 & P2135. This was also referred to as the mannenCIL (see sticker in picture above), coming from the fact that fountain pens are called 万年筆 (Man-nen-hitsu) in Japan, where 万年 means 10,000 years, and 筆 means brush/pen. As the original capped design came from copying capped fountain pen designs, it was also called 万年CIL (Man-nen-CIL), with the CIL coming from the last 3 letters of the English word "pencil" - 10,000 year pencil!

This also came in a set (PRSK20) with the RK20 Rolling Writer. But, for the PRSK10 sets (P1135/RK10), they were sold with the P1135N, so I suspect that this possibly may have had a short version as well.

The Date code is stamped in yymmdd format on the inner reservoir. The Date Code on my P2135 range is 800829.

Pentel Pencils Identification Book

P3005 Scepter Silver Plated Pencil

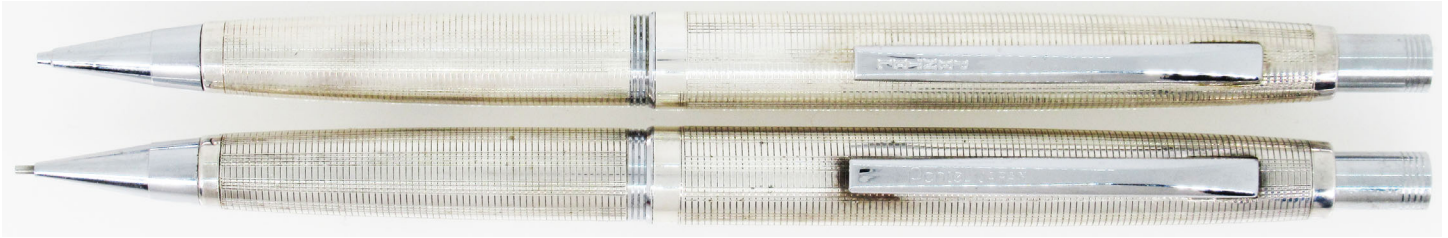

Image Source Jimmy Simpson

Size	0.5
Base Colors	Silver Plated
Years Available	Early-70's
Mfg Country	Japan
Dist Country	Japan
Price Tags	¥3000
Dimensions	Overall: 138.6mm Eraser Cap: 8.1mm Body: 70.2mm Grip: 42.1mm Tip: 18.2mm

Plated in 20-micron silver.

The first generation of this pencil had the unique style tip that the other two Scepters had: a tip that looks like a standard Pentel tip, but instead of a thin sleeve, it has an additional portion of wider tip. Also notice the difference in the text on the clips, with the first generation being the old type-face font running top to bottom, and the second generation with the new logo and JAPAN running sideways. They also had an unusual eraser band.

Second generation pencils appear to use a P205 style 2mm tip, newer text on the clip, and a standard eraser.

The band around the middle is blank, unlike the other two Scepter models.

In 2023 & 2024 a couple of pencil case sleeves turned up with the part numbers P5005 & P7005. These model numbers fit the standard Pentel model numbering where the numbers begin with the price, tacking on the size to the end. Thus the P7005 was for the ¥7000 Scepter.

A sleeve for the P3005 has not turned up yet, but it fits the model number series.

P3035 Gold Sharp Kerry Pencil

Image Source Jimmy Simpson

Size	0.5
Base Colors	Black/Gold
Years Available	1990-1995
Mfg Country	Japan
Dist Country	Japan
Price Tags	¥3000
Dimensions	Overall [Capped / Posted / No Cap]: 125.1mm / 132.3mm / 106.3mm Cap [Capped / Posted]: 64.2mm / 68.6mm Reservoir Cap: 5.3mm Body, Back: 38mm Body, Center Ring: 18mm Grip: 26mm Tip: 19mm

Released 20 years after the original P1035 Kerry, this was the original gold plated version of the Kerry, and one of the first special editions.

In 2012, Shogei Stationery released a version of this pencil as the P1035-AXK and in 2018, Kidera Shoji released a gold version of the Kerry in this same design, P1035-AXKS.

There are a couple of ways to tell this pencil from the others. At the bottom of the picture, you see on the left, the P3035 has a bolder font printing the JAPAN. Also, I believe this is the only special edition Kerry that has the lead cleanout rod as seen on the bottom right.

PA5 Automatic Pencil

Image Source Jimmy Simpson

Size	0.5
Base Colors	A Black / B Red / C Blue / D Green / S Sky Blue / V Violet
Years Available	1982 to early-80's
Mfg Country	Japan
Dist Country	Worldwide
Dimensions	Overall: 141.7mm Eraser Cap: 9.2mm Body: 78.7mm Grip: 31.5mm Tip: 22.3mm

This pencil came out the year before the PG500 series. It uses the body and a modified grip (no lead hardness indicator) of what became the PG500 and the tip of the upcoming PG300 series. The plastic lead reservoir is narrower than normal, and does not use the standard Z2-1 eraser, but a smaller unknown eraser, with a correspondingly smaller eraser cap.

The Date Code on this pencil is the last 2 characters in the text on the side of the pencil; 1K, 1L and 2D in the image above, representing November & December 1981 and April 1982.

Dimensions	Overall (retracted/extended): 136.8mm / 136.4mm Eraser Cap (retracted/extended): 9.1mm / 3.5mm Body: 106.5mm Tip (retracted/extended): 21.2mm / 26.4mm

The PC365 is the Clicsharp version of the PC315 Rolly.

It was available with the matching RC366 in the Gift Set RCPxx (xx is matching color code).

In the 1990 US catalog, this was listed in the Excalibur section, although it does not appear to have any of the normal signs ("Excalibur" text, crown or sword) of being an Excalibur.

The model name starts with PC, followed by a three-digit number, and this number indicates the price, domestic/export and size in that order.

Price digit 1 = ¥1500, 2 = ¥2000 and 3 = ¥3000

Domestic/export digit: 0-4 are for domestic (Japan) use and 5-9 are for export

In 2020, Pentel re-released these pencils, as a celebration of the 60th anniversary of the original knock-type mechanical pencils. The new release includes the 4 original colors, plus 4 new colors.

The Date Code is the 2-characters at the end of the line of text on the side of the pencil.

Winner of the 1997 Good Design Award (along with the PD215 (Type 1)). The associated ballpoint pen, the BK220, won the 1999 Good Design Award.

A side-knock type mechanical pencil with a built-in lead for the "Saprio" mechanical pencil that mainly encloses a scent that has the effect of supporting study. The shape is similar to Pianissimo.

The scent is trapped inside the core by a method called "nanocapsule manufacturing method", and by writing, the capsule is crushed and the scent component pops out, so that each scent seems to be more scented than the written line.

Pentel Pencils Identification Book

PD325 Quicker Clicker Junior Automatic Pencil

Image Source Knockologist

Size	0.5
Base Colors	A Black / B Red / V Purple
Years Available	Mid-90's to 1998
Mfg Country	Japan
Dist Country	Worldwide
Dimensions	Overall: 144.2mm Eraser Cap: 14.1mm Clip Band: 9.7mm Body: 101.3mm Tip: 19.1mm

This version of the Quicker Clicker came out in the mid to late 90's as an "economical version of America's #1 automatic pencil" (the PD345). The biggest difference is the pocket clip. Similar to how the PD335 came out in 1979 as an economical version of the 1977 PD345 by using a plastic pocket clip.

Pentel Pencils Identification Book

PD515 (Type 1) Pop'npop Automatic Pencil

Image Source <https://ameblo.jp/staedler-rotring/entry-11498098991.html>

Size	0.5
Base Colors	A Black / N Gray
Years Available	Late-70's to early-80's
Mfg Country	Japan
Dist Country	Japan
Price Tags	¥500
Dimensions	Overall: 144.2mm Eraser Cap: 14.1mm Clip Band: 9.7mm Body: 101.3mm Tip: 19.1mm

This is another case of Pentel assigning the same model number to two different pencils.

Pop'npop version of the first PD345 and, I believe, the only version of the Clic that had a metal tip.

Pentel Pencils Identification Book

PD515 (Type 2) Jetclic Automatic Pencil

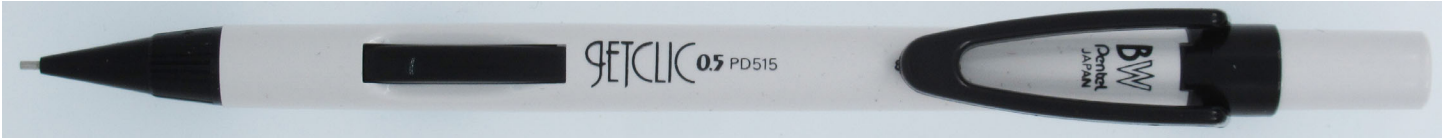

Image Source Jimmy Simpson

Size	0.5
Base Colors	W White
Years Available	1983 to late-90's
Mfg Country	Japan
Dist Country	Japan
Price Tags	¥500
Dimensions	Overall: 145.5mm Eraser Cap: 15.5mm Clip Ring: 9.5mm Body: 100.7mm Tip: 19.8mm

This is another case of Pentel assigning the same model number to two different pencils.

This pencil is a Quicker Clicker with a clip like that of the PN105 Technoclic, and was released at about the same time.

The Date Code is printed under the bottom of the clip. In the picture above, you can barely see the edge of the 8E below the clip.

PD1055 Sharp Technica "Cockpit Type" Pencil

Image Source Knockologist

Size	0.5
Base Colors	Silver
Years Available	1973 to mid-70's
Mfg Country	Japan
Dist Country	Japan
Price Tags	¥1000
Dimensions	Overall: 135.2mm Eraser Cap: 8.0mm Body (Top): 112.2mm Tip (Top): 15.0mm

This was the first side knock released by Pentel.

Recently I picked up a couple of Ads from Japan for this pencil, and in both of them, "Cockpit Type" is a big portion of the ad.

Pentel Pencils Identification Book

PD1065 Sharp Technica II Pencil

Image Source Knockologist [1] | Jimmy Simpson [2] | <https://shogei-bungu.com/?pid=24317169> [3]

Size	0.5
Base Colors	A Black / B Red / F Orange
Years Available	1974 to early-80's
Mfg Country	Japan
Dist Country	Worldwide
Price Tags	¥1000
Dimensions	Overall: 143.0mm Reservoir Cap: 13.3mm Body: 111.8mm Tip: 17.9mm

I am not sure of the significance of the tan colored 0.5mm Triangle Sticker. This pencil is the only place I have seen this color sticker; all other triangular 0.5mm stickers are red.

We don't know much about the red PD1065, with the red cap. At first we assumed that it was an early version that was discontinued, but the fact that I have seen it with both the small triangular sticker (pre-76), and the larger JIS triangular sticker ('76 and later) may just mean that it was just a rarer version, or Japan only.

Pentel Pencils Identification Book

PDS325 Quicker Clicker Junior Sliding Sleeve Automatic Pencil

Image Source Knockologist

Size	0.5
Base Colors	A Black / B Red
Years Available	Mid-90's to 1998
Mfg Country	Japan
Dist Country	Worldwide Clic - Japan Only
Dimensions	Overall (tip retracted): 142.2mm Eraser Cap: 14.1mm Clip Band: 9.7mm Body: 101.3mm Tip: 17.1mm

This rare version of the Quicker Clicker Junior has a sliding sleeve.

Although it has the model number PD325 on the clip ring, it was packaged as a PDS325 for sale.

Pentel Pencils Identification Book

PEL Sharp Pencil

Image Source Jimmy Simpson

Size	0.5
Base Colors	Stainless Steel w/ Gold Clip All Black Aluminum with Black / Red / Blue Trim
Years Available	1970 to mid-70's
Mfg Country	Japan
Dist Country	Japan
Price Tags	Stainless Steel - ¥1000 Early ¥500, Late ¥700
Dimensions	Overall [Capped / Posted / No Cap]: 114.5mm / 143.1mm / 112.3mm Cap: 44.8mm Eraser Cover: 18.2mm Body: 49.5mm Grip: 29.7mm Tip: 14.9mm

This was Pentel's first capped pencil, coming out the year before the Kerry. It appears inspired by the Japanese "short pen" fountain pens that had a very long cap, that when posted would extend the pen for writing.

Pentel Pencils Identification Book

Pentel 11 Pencil (Version 1)

Image Source Jimmy Simpson [1-5] | <http://mechanicalpencilmuseum.blogspot.com/2013/05/pentel-11.html> [6]

Size 0.5 / 0.7 / 0.9 / 1.1
Base Colors A Black / B Burgandy / C Blue / D Green / E Brown / G Yellow
Years Available 1967 to 1971
Mfg Country Japan
Dist Country Japan
Price Tags ¥300
Dimensions Overall: 145.2mm / 143.5mm
Eraser Cap: 11.3mm
Body: 114.1mm
Tip: 19.8mm / 18.1mm

Texts reads:

PENTEL ELEVEN 11 MADE IN JAPAN [Mold Number]

Also known as the Sharp 11, this pencil came in multiple sizes, and over the course of it's production, the tip size also changed from a 2mm sleeve to a 4mm sleeve, as you can see between the black, brown & red vs the blue & yellow. Also, you can see the change in the design of the clip between those same images.

The Sharp 5 CPA (from the Pentel of America 1965 One-Sheet) is an early version of the Pentel 11, and appears to be the American name for this pencil.

See article "Versions and Generations of the Pentel Eleven" in Appendix B.

Pentel Pencils Identification Book

Pentel 11 (S305 / S307 / S309) Pencil (Version 2)

Image Source Jimmy Simpson [1,2] | <https://jp.mercari.com/item/m32790198375> [3]

Size	0.5 / 0.7 / 0.9
Base Colors	A Black / B Burgandy
Years Available	1972 to early-70's
Mfg Country	Japan
Dist Country	Japan
Price Tags	¥300
Dimensions	Overall: 145.2mm Eraser Cap: 11.3mm Body: 114.1mm Tip: 19.8mm
Texts reads:	PENTEL 0.5m/m S305 JAPAN B2 PENTEL 0.5m/m S305 JAPAN B4

The B2 & B4 are probably a Mold Mark.

The Japanese text on the left side of the box translates to "Pentel Sharp".

In 1971, Pentel officially changed their name to Pentel Co. Ltd, and about that time, they redesigned their logo. When they did this, they changed the Sharp 11 to this new version with the new logo and adding the model numbers to the pencil.

See article "Versions and Generations of the Pentel Eleven" in Appendix B.

Pentel Pencils Identification Book

Pentel 11 For Film Pencil

Image Source Jimmy Simpson

Size	0.9
Base Colors	G Yellow
Years Available	1971
Mfg Country	Japan
Dist Country	Japan
Dimensions	Overall: 145.2mm / 143.5mm Eraser Cap: 11.3mm Body: 114.1mm Tip: 19.8mm / 18.1mm

This pencil is based on the Version 1 Pentel 11, Generation 4, from about 1971.

The P1 at the end of the line of text is the lead hardness that this pencil is supposed to use. For Film lead goes from hardness P1, the softest, to P5, the hardest (P4 & P5 were only available in 0.9mm), and was used for writing on mylar sheets (film) over plans or maps, so you could "mark them up" without damaging the original.

See article "Versions and Generations of the Pentel Eleven" in Appendix B.

Pentel Pencils Identification Book

PF335 / PF337 / PF339 Film Lead Pencils

Image Source Jimmy Simpson

Size	0.5 / 0.7 / 0.9
Base Colors	All Creme Bodies 0.5 Brown/Red text 0.7 Blue text 0.9 Yellow text
Years Available	Mid-70's to late-90's
Mfg Country	Japan
Dist Country	Worldwide
Dimensions	Overall: 143.7mm Eraser Cap: 11.4mm Body: 112.0mm Tip: 20.3mm

The PF335 & PF337 have sliding sleeve tips (3 to 5 mm). The PF339 has a fixed tip.

For Film lead goes from hardness P1, the softest, to P5, the hardest (P4 & P5 were only available in 0.9mm), and was used for writing on mylar sheets (film) over plans or maps, so you could "mark them up" without damaging the original.

Due to the type of lead being used, it was probably too expensive to manufacture the special eraser for the pencils, so Pentel just used a rubber stopper. There was a ZF11 block eraser for use with this lead.

Date Codes may be either stamped (70's-early 80's) on the lead reservoir in yymmdd format or (80's & later) stamped or printed under the band of the clip, in line with the printed text.

I am not completely sure of what the difference in the ring was. I know on the PMG, one was sold in Japan, and the other in the rest of the world. Here, I am not so clear on, as the yellow ring appears in the US 79, 80 & 82 catalogs, then the silver ring in the 84 & 85, before switching back to yellow for all subsequent catalogs.

I have included the breakdown of the PG5 to give a comparison to it's precursor, the Graph II [See the article "Graph II vs PG5" in Appendix B].

Pentel Pencils Identification Book

PMG (Pentel Mechanica Graph) version 1 Graph Pencil

Image Source Jimmy Simpson

Size	0.3
Base Colors	Red Band (Japan) / Gold Band (US & Europe)
Years Available	1970 to mid-70's
Mfg Country	Japan
Dist Country	Worldwide
Price Tags	¥1000
Dimensions	Overall [Capped / Posted]: 147.5mm / 146.9mm Reservoir Cap: 7.7mm Extender: 17.9mm Ring: 8.5mm Body: 94.0mm Tip: 19.4mm Tip Cap: 20.2mm

Designed as a lower-cost version of the flagship Pentel Mechanica MEC and based off the Pentel Graph body, the PMG (Pentel Mechanica Graph) was released in 1970. As occasionally happens among many Pentel pencils, there is a different design for the different markets, with the Japanese market having a red band around the lead indicator and the overseas market having a gold ring.

The version 1 of this pencil is designed very similarly to the Graph II, in that the lead type indicator and ring go onto a connector molded into the body. Due to this molded connector, the lead reservoir will not fit in from the rear, so the reservoir has a 5mm thread that screws into the front of the body.

Indicators to see if this is the version 1 would be the text on the side only saying 0.3m/m in italics, and in one of the cutouts, the name PENTEL is in the old typeface font.

See article "PMG Version 1 vs Version 2" in Appendix B.

Pentel Pencils Identification Book

PMG (Pentel Mechanica Graph) version 2 Graph Pencil

Image Source Jimmy Simpson

Size	0.3
Base Colors	Red Band (Japan) / Gold Band (US & Europe)
Years Available	Mid-70's to late-00's
Mfg Country	Japan
Dist Country	Worldwide
Price Tags	Early ¥1000, Later ¥1300
Dimensions	Overall [Capped / Posted]: 147.5mm / 146.9mm Reservoir Cap: 7.7mm Extender: 17.9mm Ring: 8.5mm Body: 94.0mm Tip: 19.4mm Tip Cap: 20.2mm

Designed as a lower-cost version of the flagship Pentel Mechanica MEC and based off the Pentel Graph body, the PMG (Pentel Mechanica Graph) was released in 1970. As occasionally happens among many Pentel pencils, there is a different design for the different markets, with the Japanese market having a red band around the lead indicator and the overseas market having a gold ring. Of all of the Graph designs, it is the only one that has a tip protector, whose design is also similar to the P515 Sharp L.

This is the redesigned version of the PMG that was done to help streamline production. By separating the body/connector into two pieces, it allowed the reservoir to be dropped in from the back, speeding up the process.

The two indicators that this is a later version of the PMG are the text on the side including the name PMG, and the name Pentel in the cutout (behind the grip) being in the current logo font.

See article "PMG Version 1 vs Version 2" in Appendix B.

PN305 QX Pencil

Image Source <http://mechanicalpencilmuseum.blogspot.com/2013/05/pentel-qx-pn305.html>

Size	0.5
Base Colors	Black
Years Available	1990 to early-00's
Mfg Country	Japan
Dist Country	Japan
Price Tags	¥3000

The QX is labelled on the box as “Push and Write” and not as an automatic. They did this intentionally to distinguish the QX’s mechanism from other automatics of the time.

All these automatics have one important drawback (which is what puts most people off): The lead sleeve needs to touch the paper and retract for lead to extend. This results in a scratchy feel and lighter pencil strokes.

Here’s how the QX works: When you push the tip against the paper (even with the lead extended), it will retract a little (kind of like a lead cushioning system, but not as soft) and when it springs back it will extend the lead further. The important thing to note here is that the entire tip including the lead and lead sleeve retracts. So you can “knock” the pencil at any point and ideally before the sleeve touches the paper. It took me a few paragraphs of writing to get used to this, but you keep getting lead fed without the sleeve ever touching the paper. I know this sounds weird but I started subconsciously “knocking” the pencil by pushing a little harder at every period pretty quickly. This eliminates the drawback of other automatics. There is no other pencil that does this.

Pentel Pencils Identification Book

PNR9 Non-Repro Sharp Pencil

Image Source Jimmy Simpson

Size	0.9
Base Colors	Red
Years Available	Mid to late-80's
Mfg Country	Japan
Dist Country	Japan
Dimensions	Overall: 146.2mm Eraser Cap: 14.2mm Body: 78.3mm Grip: 31.6mm Tip: 22.1mm

This pencil is made from the body, tip and eraser cap of the PG509 and the grip of the PA5. The lead reservoir is metal, just like the PG509.

It came with non-reproductive red lead for making markups on documents.

The 2-digit Date Code is printed under the clip.

Dist Country	Worldwide
Dimensions	Overall: 135.5mm Eraser Cap: 11.5mm Body: 110.3mm Tip: 13.7mm

The PS35-65 models manufactured around 1978 to 1985, continue with the extended lip tip into the body recess. The original pencils used the aluminum lead reservoir and had the a narrow opening at the cap end. Around 1981-1982, manufacturing switched to a plastic lead reservoir and the cap end opening was expanded to accommodate this.

It was available with the matching R3 in the Roller Pen Set PRS-3.

The P575 Crew, the P595 Pop'npop, the Rush on Goal and the PS35/PS45/PS65 all have similar form factors.

The Date Code is stamped on the lead reservoir in yymmdd format. Known Date Codes on aluminum lead reservoirs are between 781023 to 810127, and on plastic lead reservoirs, between 811126 to 840329.

PS315 Sharp for Pros with Sliding Sleeve

Image Source Jimmy Simpson

Size	0.5
Base Colors	N Gray / C Blue
Years Available	Mid-70's to early-10's
Mfg Country	Japan
Dist Country	Worldwide
Dimensions	Overall: 143.6mm Eraser Cap: 11.3mm Body: 112.0mm Tip: 20.3mm

Originally released in Gray with a short text in the mid-70's, Pentel switched to a Blue body with the same text in the next generation, then quickly switched to the standard P200 style text with the m/m size. In the next generation, Pentel dropped the slash in the mm and finally in the last version, the Blue plastic used for the body got slightly darker.

Date Codes may be either stamped (70's-early 80's) on the lead reservoir in yymmdd format or (80's & later) stamped or printed under the band of the clip, in line with the printed text.

Pentel Pencils Identification Book

PS513 Sharp Sliding Sleeve Pencil

Image Source Jimmy Simpson

Size	0.3
Base Colors	Silver with Black / Red Grip
Years Available	1970 to mid-80's
Mfg Country	Japan
Dist Country	Worldwide
Dimensions	Overall: 129mm Eraser Cap: 9.5mm Body: 71mm Grip: 34mm Tip: 14.5mm

It wasn't until I received the bottom pencil in the image above that I realized that the top pencil (3 over Pentel) used the old-style font, which means that it (as well as the ML3) was probably released in 1970, before the new logo was released. The bottom pencil (Pentel over 3), was probably a mid to late-70's revision when the old stock was depleted. I knew about the bottom design from the US catalogs from that era.

Pentel Pencils Identification Book

PS523 Sharp for Pros with Sliding Sleeve

Image Source Jimmy Simpson

Size	0.3
Base Colors	D Olive Green
Years Available	Late-70's to late-90's
Mfg Country	Japan
Dist Country	Worldwide
Dimensions	Overall: 143.6mm Eraser Cap: 11.3mm Body: 112.0mm Tip: 20.3mm

The PS designation for this pencil refers to the Sliding Sleeve tip. This pencil was first released in the late-70's with a shorter text on the side. This was quickly switched to what is the standard text for P200 style pencils with the m/m size. The final generation of this pencil dropped the slash from the mm, along with some other minor changes.

Date Codes may be either stamped (70's-early 80's) on the lead reservoir in yymmdd format or (80's & later) stamped or printed under the band of the clip, in line with the printed text.

Pentel Pencils Identification Book

PS535 Sharp Sliding Sleeve Pencil

Image Source Jimmy Simpson

Size	0.5
Base Colors	Black
Years Available	1970 to early-10's
Mfg Country	Japan
Dist Country	Worldwide
Dimensions	Overall: 141mm Eraser Cap: 11mm Body: 68mm Grip: 44mm Tip: 18mm

This pencil has the same ridged grip as the S50 series. The most distinctive thing about this pencil is the black body with the silver ring at the bottom that is notched out for the name Pentel.

It is related to the BS5 Black Sharp 5 pencil (same pencil with a fixed tip).

The first generation PS535 did not have a Date Code stamp (since it started around 1970). The second generation had the yymmdd format printed on the inner reservoir (760614 above). The third generation Date Code was stamped in 2-digit format (8F above).

Pentel Pencils Identification Book

PSD5 Double-Knock Drafting Pencil

Image Source Jimmy Simpson

Size	0.5
Base Colors	Black
Years Available	1980 to late-80's
Mfg Country	Japan
Dist Country	Worldwide
Dimensions	Overall [Retracted]: 136.8mm Cap Eraser: 13.6mm Body: 64.2mm Ring: 7.8mm Grip & Tip: 51.2mm

This pencil was sold everywhere in the world as the PSD5, except in Japan, where it was marketed as the PWP15. As far as I know, the only difference between the two, is the Lead Indicator Ring. On the front of the PSD5 ring, above the indicator window, it says Pentel. Rotating clockwise (looking from the eraser), it says 0.5, and on the back it has PSD5 above Japan.

The date code on these pencils (PSD5/PWP15) is different from any other known Pentel pencil. It is stamped into the body of the reservoir in YYMM . . . format, running up and down, not sideways. This has led some collectors to wonder, since these pencils had a smaller run, if the manufacturing may have been outsourced by Pentel, or at least not in their Japan factories.

Pentel Pencils Identification Book

PW25 / PW27 FlexFit Automatic Pencil

Image Source <https://www.worthpoint.com/worthopedia/pentel-flexfit-mechanical-pencils-1877745122> [1] | Jimmy Simpson [2]

Size	0.5 / 0.7
Base Colors	A Black / B Red / C Blue
Years Available	Early to late-00's
Mfg Country	Japan
Dist Country	Worldwide
Dimensions	Overall [Retracted / Extended]: 145.6mm / 144.5mm Cap Eraser [Retracted / Extended]: 11.1mm / 7.0mm Body: 80.0mm Grip: 43.8mm Tip [Retracted / Extended]: 10.7mm / 13.7mm

As can be seen in the bottom pencil in the picture above, later generations of the FlexFit lost the colored rubber grip for a translucent grip, while retaining the triangular grip pattern.

Pentel Pencils Identification Book

PW35 / PW37 FlexFit II / FlexFit GT Automatic Pencil

Image Source Pentel of Japan 2006 Catalog [1-3], Pentel of Australia 2007 Catalog [4]

Size	0.5 / 0.7
Base Colors	A Black / C Blue / S Sky Blue / Z Silver
Years Available	2004 to late-00's
Mfg Country	Japan
Dist Country	FlexFit II - Worldwide FlexFit GT - Japan only
Dimensions	Overall [Retracted / Extended]: 145.6mm / 144.5mm Cap Eraser [Retracted / Extended]: 11.1mm / 7.0mm Body: 80.0mm Grip: 43.8mm Tip [Retracted / Extended]: 10.7mm / 13.7mm

This was known as the FlexFit GT in Japan, and FlexFit II in the rest of the world.

Winner of the 2004 Good Design Award.

Pentel Pencils Identification Book

PWP15 Double-Knock Drafting Pencil

Image Source Jimmy Simpson [1,2] | Pentel of America 1980 Catalog [3]

Size	0.5
Base Colors	Black
Years Available	1980 to late-80's
Mfg Country	Japan
Dist Country	Japan
Price Tags	¥1200
Dimensions	Overall [Retracted]: 136.8mm Cap Eraser: 13.6mm Body: 64.2mm Ring: 7.8mm Grip & Tip: 51.2mm

Marketed as the PWP15 in Japan, it was sold overseas as the PSD5. As far as I know, the only difference between the two, is the Lead Indicator Ring. On the front of the PWP15 ring, above the indicator window, it says 0.5. Turning right, it says Pentel, and on the back it has PWP15 above Japan.

The only version of this pencil I have seen is the silver metal grip, but when it was introduced in the 1980 Pentel of America catalog, the grip was shown in black. I believe this is a photo of the prototype PWP15. And even though it was in the PSD5 entry, it appears to be a PWP15 because of what looks like Pentel on the side of the ring.

The date code on these pencils (PSD5/PWP15) is different from any other known Pentel pencil. It is stamped into the body of the reservoir in YYYYMM . . . Format, running up and down, not sideways. This has led some collectors to wonder, since these pencils had a smaller run, if the manufacturing may have been outsourced by Pentel, or at least not in their Japan factories.

Q45 Charisma Automatic Pencil

Image Source Jimmy Simpson

Size	0.5
Base Colors	A Black / B Red / C Blue
Years Available	1981 to late-90's
Mfg Country	Japan
Dist Country	Worldwide
Dimensions	Overall: 134.7mm Eraser Cap: 9.0mm Body: 105.6mm Tip: 20.1mm

The Q45 was available with the matching RSH4 in the Super Ball Metal Tip Set QRS4-4x (x is matching color code).

Since the other two pencils in this series are the Q525 and the Q565, why is this one called the Q45. It had to be that the Q545 Sharplet 500 already existed.

The Date Code on this series of pencils is right at the transition point from the yymmdd format to the 2-character format.

Q525 Charisma Automatic Pencil

Image Source Jimmy Simpson

Size	0.5
Base Colors	Silver
Years Available	1981 to late-90's
Mfg Country	Japan
Dist Country	Worldwide
Dimensions	Overall: 134.7mm Eraser Cap: 9.0mm Body: 105.6mm Tip: 20.1mm

The bottom pencil in the picture ("0.5" over "Pentel" over "Japan" on the back) is one I have never seen until I purchased it. All other Q525 I find online have the normal text along the side ("0.5 Pentel Q525 JAPAN").

The Q525 was available with the matching RSH3 in the Super Ball Metal Tip Set QRSH-3.

The Date Code on this series of pencils is right at the transition point from the yymmdd format to the 2-character format.

Q535 Kerry Mechanical Pencil

Image Source Jimmy Simpson [1-4] | Pentel of America 1982 Catalog [5]

Size	0.5
Base Colors	B Red / C Blue / D Green / G Yellow
Years Available	1980 to mid-80's
Mfg Country	Japan
Dist Country	Worldwide
Price Tags	¥500
Dimensions	Overall [Capped / Posted / No Cap]: 124.7mm / 133.3mm / 108.2mm Cap [Capped / Posted]: 55.7mm / 59.8mm Reservoir Cap: 4.9mm Body: 89.8mm Tip: 17.5mm

This pencil was released as a low end Kerry pencil. We finally determined that these were released in 1980 and lasted to the mid to late-80's.

This was also referred to as the mannenCIL (see sticker & clip in picture above), coming from the fact that fountain pens are called 万年筆 (Man-nen-hitsu) in Japan, where 万年 means 10,000 years, and 筆 means brush/pen. As the original capped design came from copying capped fountain pen designs, it was also called 万年CIL (Man-nen-CIL), with the CIL coming from the last 3 letters of the English word "pencil" - 10,000 year pencil!

I suspect that there were export versions of these pencils without the 万年CIL sticker on the clip. In the 1982 Pentel of America catalog (see bottom image above), the same body and cap are used, but the sticker is like that of the Pop'npop versions, a graduated color pattern.

Q535 Pop'npop (Series 1) Mechanical Pencil

Image Source Jimmy Simpson

Size	0.5
Base Colors	Solid Color Caps B Red / C Blue / D Green / G Yellow
Years Available	1980 to mid-80's
Mfg Country	Japan
Dist Country	Japan
Price Tags	¥500
Dimensions	Overall [Capped / Posted / No Cap]: 124.7mm / 133.3mm / 108.2mm Cap [Capped / Posted]: 55.7mm / 59.8mm Reservoir Cap: 4.9mm Body: 89.8mm Tip: 17.5mm

This series of Pop'npop pencils were probably the first released from the Q535, since they are a close match to the Q535 Kerry, with a slight change to the color of the clip and top ring of the cap.

Q545 Sharplet 500 Mechanical Pencil

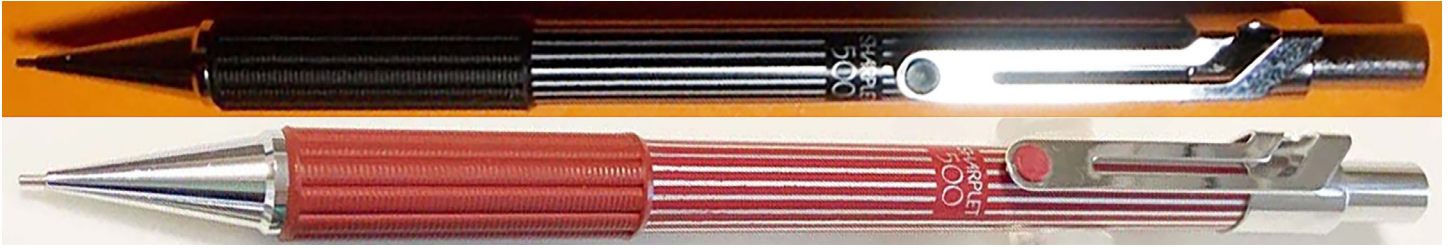

Image Source <http://mysupplyroom.blogspot.com/2016/08/new-old-pentel-q545.html> [1] | Aucfree.com [2]

Size	0.5
Base Colors	A Black / B Red / C Blue / D Green
Years Available	1985 to late-90's
Mfg Country	Japan
Dist Country	Worldwide
Price Tags	¥500
Dimensions	Overall: 135.1mm Eraser Cap: 12.3mm Body: 74.2mm Grip: 29.6mm Tip: 19mm

This pencil is of unknown vintage, so I had to look at other pencils to determine the years of availability. The Q(5)x5 series (Q45, Q525, Q565) pencils I own have a date code printed and/or stamped into the lead reservoir. The earliest is 880617 (June 17, 1988) and the last is 1J (new format, October 1991). Why would they number the Q45 as that instead of Q545? It had to be that the Q545 model was already in existence, or planned, so this pushes the date back to the mid-80's.

QD5 Quick Dock Mechanical Pencil

Image Source <http://afterschool-stationery.blog.jp/archives/2261474.html> [1] | Jimmy Simpson [2-6]

Size	0.5
Base Colors	K Lime Green / P Pink / S Sky Blue / V Violet Cartridges - Blue, Pink, Yellow
Years Available	2008 to early-10's
Mfg Country	Japan
Dist Country	Japan
Price Tags	¥450
Dimensions	Overall (retracted / extended): 137.4mm / 140.4mm Eraser Cover: 9.7mm Body: 73.5mm Grip: 39.1mm Tip (retracted / extended): 15.1mm / 18.1mm

This version of the Quick Dock pencil was subcontracted out to Kotobuki, who manufactured these for several brands, including their own Penac brand.

It was marketed, promoting the idea that instead of refilling with lead, you just changed out the cartridge that already contained lead, and a new eraser. The Pentel version could be combined into 12 different color combinations with the 4 body colors and 3 cartridge colors.

Winner of the 2008 Good Design Award

Dist Country	Japan
Price Tags	¥300
Dimensions	Overall: 137.8mm Eraser Plunger: 49.0mm Body: 63.8mm Tip: 25.0mm

This is a Japanese only version of the QE405 Twist-Erase pencil and came with an eraser that matches the color of the pencil body.

The name "Gomdale" is a contraction created by Pentel for this model.

Gomu (ゴム):** The Japanese word for "eraser".

Dale (ダレ):** A reference to the "twist out" or screw-out mechanism used to advance the eraser.

The Date Code is the 2-characters at the end of the line of text on the side of some of the pencils.

Winner of the 1989 Good Design Award.

Size	0.5
Base Colors	The Color Codes are my (Jimmy Simpson) designation. There is nothing official about these. Type A - Rush On Goal printed diagonally = CZ Silver on Blue / ZZ Silver on Frosted Silver Type B - 4-point star on each side = AB Red-Black / AC Blue-Black / ZB Red-Silver / ZC Blue-Silver Type C - Field of Stars (ROG on front) = BX Gold on Red / CX Gold on Blue Type D - Three Stripes winding from side to front to side = AD Green on Black / CX Gold on Blue Type E - Field of Stars (ROG on side) = ZC Blue on Silver / ZF Orange on Silver

Years Available 1979 to early-80's

Mfg Country Japan

Dist Country Japan

Price Tags ¥500

Dimensions Overall: 137.3mm
Eraser Cap: 10.9mm
Body: 110.3mm
Tip: 16.1mm

Says "Rush On Goal" somewhere on the pencil, depending on design. No model number is printed on the pencil.

Since it was manufactured at the same time as the P595 Pop'npop, I suspect this may be model P595 (non-Pop'npop version). But until we find some evidence of this or another model number, it will remain cataloged as "Rush On Goal".

The Date Code is stamped on the lead reservoir in yymmdd format. Known Date Codes for these pencils are between February 1979 (790215) to January 1981 (810129). These pencils have an aluminum reservoir.

I just recently received an all Black Sharp 9 (S-19), that can be seen at the bottom of the image for that pencil. When I first encountered the item at the top of this image, I saw it and assumed that it was the same pencil, until I noticed something about it. I noticed the lead sleeve on the tip, but the Sharp 9 pencils do not have a lead sleeve, they just feed right out of the tip.

Dimensions	Overall: 141mm Eraser Cap: 11mm Body: 68mm Grip: 44mm Tip: 18mm

The S55/S57/S59 Deluxe Pencil has a ridged grip with a metal body. The ridges on the early 1960's pencils were much deeper than on later versions, and some early versions had eraser caps with the size stamped on the end. The body has not changed much over time, other than the size, stamped into or printed on the body, with the earliest pencils being stamped with "5", even when they are 0.7 & 0.9mm (see set of maroon pencils above). The inner lead reservoir started out metal but in the late-70's changed to being manufactured in plastic.

Early shipping boxes showed the model number to be S-55, with later ones showing S55. According to a Pentel timeline that has been put on the internet, this appears to have been originally called S5 (probably for Sharp 5). I suspect it picked up the S55 name because the original 5 stamp (see top 3 pencils above) had "FIVE" written inside the bottom portion of the Number "5" and thus Sharp 5-Five or S55.

See article "Generational Changes to the S55" in Appendix B.

Pentel Pencils Identification Book

SG Sharp Gold Pencil

Image Source Jimmy Simpson

Size	0.5
Base Colors	Matt Black with Gold Trim
Years Available	1970
Mfg Country	Japan
Dist Country	Japan
Price Tags	¥1000
Dimensions	Overall: 138.9mm Eraser Cap: 11.1mm Body: 69.8mm Grip & Ring: 46.2mm Tip: 11.8mm

Like the early SV, the SG does not have any marking below the clip to indicate size or a crown indicating an Excalibur. The only markings on it are "Japan" opposite where the crown would be, and Pentel (old typeface) plus the stylized P on the clip. A few other major differences between this SG and later SG# pencils is that this one is about 7mm longer, and (aside from the SG7 version 1) it has a different style cap and the tip is a smooth curve all the way to the lead exit, instead of having a different pipe inserted.

According to the original box, this Sharp is model SG and listed as Gold, which is the way these were described in the 1970 Japanese One-Sheet. This also makes sense of where the SG name came from: Sharp Gold. This also makes sense of the rest of the SG series (minus the SV silver pencils) taking their name from being Gold or Gold accented pencils.

Another definitive indicator of the timeframe this came out, is on the case of a dozen of these packaged pencils, it has "Visit the Pentel EXPO70 3-PO-16". I am not sure what the 3-PO-16 means (possibly their booth location), but telling you to visit EXPO70 (1970 World Exposition in Osaka Japan), along with being one of the pencils in the 1970 Japanese One-Sheet, pretty much says this one came out in early 1970.

Pentel Pencils Identification Book

SG7 (Version 1) Early Excalibur Pencil

Image Source Jimmy Simpson

Size	0.7
Base Colors	Matt Black with Gold Trim
Years Available	1972-1974
Mfg Country	Japan
Dist Country	USA
Dimensions	Overall: 133mm Eraser Cap: 9.5mm Body: 63mm Grip & Ring: 48.5mm Tip: 12mm

I discovered this pencil on the Wayback Machine for Germ's Pencils11 blog. He had a picture of all of his Excalibur and SG pencils, and there were a number of them that I had not seen before.

This pencil looks like an SG15 and has that matt finish, but if you look closely at the text above the ring, it says Pentel (newer font) and has the Excalibur crown above that (this Crown is outline format vs the P1005/P1007 line drawing format), as well as the Pentel (old-style font) down the clip with the stylized P at the top. Like the SG, it also has the smooth eraser cap and the single-piece tip.

What I believe happened is that Pentel Japan released the SG pencil (as shown in their 1970 Japanese One-Sheet catalog), and Pentel of America wanted to release it as well, so it was released as the SG7 (being a 0.7mm vs the SG 0.5mm) as one of the first Excaliburs (along with the P1005/P1007). Probably in the mid to late-70s, Pentel Japan released the PX22 Gloss Black Excalibur, Pentel of America picked to go with it and replaced the SG7 with the Glossy version.

I have not seen this, but I suspect that there is an SG5 that was released in Japan at the same time as this one. All other Excalibur Crown pencils were released in Japan as 0.5mm & in the rest of the world as 0.7mm, so it makes sense that this exists.

This was previously cataloged as Unknown Model 08, and the SG7 designation has been confirmed by a 1973 Excalibur Brochure.

See the article "Excalibur Crown Pencils & Family" in Appendix B.

Pentel Pencils Identification Book

SG7 (Version 2) "Excalibur" Pencil

Image Source Jimmy Simpson

Size	0.7
Base Colors	Matt Black with Gold Trim
Years Available	1975-1977
Mfg Country	Japan
Dist Country	USA
Dimensions	Overall: 132mm Eraser Cap: 8.5mm Body: 63mm Grip & Ring: 48.5mm Tip: 12mm

I first saw the SG7 Version 2 pencil on the Wayback Machine for Germ's Pencils11 blog. He had a picture of all of his Excalibur and SG pencils, and there were a number of them that I had not seen before.

I finally acquired this SG7 pencil in a set with a similarly colored Excalibur pen (that I tentatively identify as an early RG10). Both of these are monogrammed with "The Mitsui Bank of California", which opened in 1972. My guess is that this was a gift set when they opened at that time, therefore placing this in the very early days of the Excalibur series. I believe this was an early Excalibur, probably a stop-gap after the run of the first Black Excalibur, the SG7 (Version 1), had sold out, but before the new glossy SG7 was released, and is thus a very limited release.

The designation SG7 has been verified with another box set of only the SG7 that had the price tag with that designation and a price of \$8.50.

In earlier books, I had this SG7 entered as Unknown Model 09.

See the article "Excalibur Crown Pencils & Family" in Appendix B.

Pentel Pencils Identification Book

SG7 (Version 3) / PX7-22 Excalibur Pencil

Image Source Jimmy Simpson

Size	0.7
Base Colors	Gloss Black with Gold Accents
Years Available	1977 to Late-80's
Mfg Country	Japan
Dist Country	Worldwide
Dimensions	Overall: 132mm Eraser Cap: 8.5mm Body: 63mm Grip & Ring: 48.5mm Tip: 12mm

When this series of Excaliburs was released by Pentel HQ, Pentel of America, decided to keep the same model number that they had been selling the black/gold Excalibur under (SG7). But other countries in the world appear to have gone with the same model number format that was used for the PX7-21. In this case, this pencil was sold as PX7-22. This new information about the PX7-22 is from a 1978 Pentel UK Christmas catalog.

This is the third Excalibur to use the model number SG7, and is a change to the design, going from a matt finish, to this new glossy black finish with the printed on Crown over Excalibur logo.

The SG7/PX7-22 is a match for the RG10/RX22 Excalibur Pen. It was available with the matching RG10/RX22 in the Excalibur gift set, EX-17 (US)/EX22 (other countries).

The SG7/PX7-22 is the 0.7mm version of the PX22 (0.5mm) that was only available in Japan.

See the article "Excalibur Crown Pencils & Family" in Appendix B.

Pentel Pencils Identification Book

SV (Version 1) Sharp Silver Pencil

Size	0.3
Base Colors	SV Brushed Silver
Years Available	1970
Mfg Country	Japan
Dist Country	Japan
Price Tags	¥1000
Dimensions	Overall: 138.9mm Eraser Cap: 11.1mm Body: 69.8mm Grip & Ring: 46.2mm Tip: 11.8mm

This Sharp Silver pencil appears to be the original pencil from the 1970 Japanese One-Sheet. It is longer (by about 6.5mm) than the later versions of the SV/SG style pencils.

It was unknown to most modern collectors, outside of Japan, until it showed up in an auction in August 2024.

See the article "Excalibur Crown Pencils & Family" in Appendix B.

Pentel Pencils Identification Book

SV (Version 2) / SV5 Sharp Silver Pencil

Image Source Jimmy Simpson

Size	0.3 / 0.5
Base Colors	SV Brushed Silver SV5 Brushed Silver / A Black-Blue / C Blue / D Green / E Brown
Years Available	Silver 1971 to mid-80's Colors Mid-70's to 1978
Mfg Country	Japan
Dist Country	Japan
Price Tags	SV Early ¥1000, Later ¥1200 SV5 ¥1000
Dimensions	Overall: 132mm Eraser Cap: 8.5mm Body: 63mm Grip & Ring: 48.5mm Tip: 12mm

At one point, I believed that the top pencil in the picture above was the pencil from the 1970 Japanese One-Sheet catalog, but it turns out not to be the case. The internals are also very different in that the lead reservoir screws into the front of the grip where later ones drop in the back.

In the mid to late-70's, Pentel released the colors under the SV5 series with the color code (I am not absolutely positive about the A code, since it is truly a dark blue).

These pencils are commonly referred to as the SG33 / SG35 / SG45, but were cataloged and distributed as the SV / SV5. I believe that the common model numbers came from the fact that the SG (Sharp Gold) line became the SG15, SG65 & SG75, and someone decided that the SV (Sharp Silver) line were the SG33/5 and SG45, like the PS35/45/65 models.

See the article "Excalibur Crown Pencils & Family" in Appendix B.

Pentel Pencils Identification Book

Unknown Model 12

Image Source Jimmy Simpson [1,5] | syake1505 [2-3] | <https://auctions.yahoo.co.jp/jp/auction/v1222142054> [4]

Size	0.9
Base Colors	A Black / C Blue / D Green / G Yellow
Years Available	Early-70's
Mfg Country	Japan
Dist Country	Japan
Dimensions	Overall: 141.4mm Eraser Cap: 16.1mm Reservoir: 5.3mm Body: 105.0mm Tip: 15.0mm

This pencil turned up as the sole Pentel, in an auction for a bunch of packaged pencils. When looking at this, there are several things that stand out to me.

1. Longitudinal ridges for the grip, in front of the eraser cap and the (white) eraser cap itself.
2. The text on the side says Pentel (new Logo) over Japan 7 (mold mark), with a white printed section on the side. This looks like it could be for writing on and personalizing it.
3. This tip is a 0.9mm without a sliding sleeve and screws onto a 5mm thread. The only pencils I have seen like this started out in the 1960's, but the logo on the side dates this to 1970 or later. The tip is interchangeable with the Pentel 100, the Sharp 9 (PS-100) and the Sharp 9 (S-19) pencils.
4. This pencil does not have a clip, but a molded "ring" for attaching something, possibly a chain to hold it to a desk or clipboard? If this was a 2000's pencil, I would suspect it was for a charm or lanyard clip.

There were at least 2 generations of this pencil. The white field version appears to be the first generation. The second generation dropped this white field and has the size molded into it, opposite the molded pentel.

Pentel Pencils Identification Book

Appendix A - Branded Pentels

Pentel Pencils Identification Book

Branded Pentels

When I first started putting this book together, I decided that I did not want to have limited edition or special pencils in here, other than the Pop'npop and eventually, the Olympics pencils. I wanted to just keep base models in this. I then realized that a lot of the special pencils had unique numbers and started by adding the Disney pencils.

With catalog v2022.02, I started adding other Disney pencils I found. With version v2022.05, I created the Retailer (now Branded) Pentels section of the book and moved the Disney pencils to that section, along with adding several other brands, including Burberry, Craft Design Technology, Person's Collection and Renoma.

Most of these pencils were unique in style and color, but there was one that was just brands exclusive pencils with limited edition colors, and another that had a standard color Kerry with a unique center ring.

Another brand had what looked to me to be just a P205 purchased through the Pentel Imprint Division with their name stamped on it.

There are other brands that carry exclusives on limited edition colors, but I did not know what all stores and what were exclusive to them.

So, as of v2022.11 of this book, I decided to drop brands that don't have unique styling of pencils, so I have dropped Loft which carried limited edition colors of P205, PG1005 and Q1005 Smash pencils. I also dropped Freitag because it looks to just be the imprinted P205.

I am keeping Delfonics, Graniph and Muji because although they are pretty much standard pencils in the P200 and PG510 range, they are printed with their own unique style, or in the case of Muji, no printing at all. I am still up in the air about Delfonics, but if I pull the Graniph out of Branded section, it will move to the front of the book since it is a co-brand between Pentel Stein and Graniph, with its own unique model number.

All the other brands either have unique styles that may or may not be based on standard Pentel pencils, or they have very unique printing based on their properties.

Recently I came upon an auction for a couple of packaged P565 Disney pencils, and the package confirmed the model number: XP565 (X denoting package product). After flip-flopping back and forth over the years about where these pencils belong (along with the Popeye version), I have decided that they will live in the Branded Section.

Size	0.5
Base Colors	Colors with Gold Trim A Black / B Red / C Navy / D Green
Years Available	1990's
Mfg Country	Japan
Dist Country	Worldwide
Dimensions	Overall [Capped / Posted / No Cap]: 137.7mm / 143.2mm / 121.8mm Cap [Capped / Posted]: 61.2mm / 65.5mm Reservoir Cap: 7.0mm Body, Back: 37.3mm Body, Center Ring: 32.1mm Grip: 26.9mm Tip: 18.4mm

These pencils were a collaboration between Pentel and Burberry, a specialized clothing brand. In 1999, Burberry's of London changed their name to Burberry. As far as I can tell, this pencil was produced with only the early logo.

This pencil is based on the P1035 Kerry.

Pentel Pencils Identification Book

Burberry BEP7E Windsor Automatic Pencil

Image Source Jimmy Simpson [1,2] | Burberry (mid-2000's) Catalog [3]

Size	0.5
Base Colors	Brown Faux Leather with Gold Trim
Years Available	1990's to 2000's
Mfg Country	Japan
Dist Country	Worldwide
Dimensions	Overall [Capped / Posted / No Cap]: 137.7mm / 143.2mm / 121.8mm Cap [Capped / Posted]: 61.2mm / 65.5mm Reservoir Cap: 7.0mm Body, Back: 37.3mm Body, Center Ring: 32.1mm Grip: 26.9mm Tip: 18.4mm

These pencils were a collaboration between Pentel and Burberry, a specialized clothing brand. In 1999, Burberry's of London changed their name to Burberry. This pencil was produced with both logos.

This pencil is based on the P1035 Kerry.

The bottom pencil in the image is, I believe, from a mid-2000's Burberry catalog. Notice the different tip. I have not seen one of this style, so I don't know if this was an actual release, or a prototype of a replacement for the Kerry tip. This was the only "Kerry"-style pencil in this catalog.

Pentel Pencils Identification Book

Burberry BEP9 Libera Automatic Pencil

Image Source Jimmy Simpson

Size	0.5
Base Colors	A Black / B Red / C Navy
Years Available	1990's to 2000's
Mfg Country	Japan
Dist Country	Worldwide
Price Tags	¥6000
Dimensions	Overall [Capped / Posted / No Cap]: 136.3mm / 143.2mm / 120.4mm Cap [Capped / Posted]: 61.2mm / 65.5mm Reservoir Cap: 5.6mm Body, Back: 37.3mm Body, Center Ring: 32.1mm Grip: 26.9mm Tip: 18.4mm

These pencils were a collaboration between Pentel and Burberry, a specialized clothing brand. In 1999, Burberry's of London changed their name to Burberry. This pencil was produced with both logos, although the Navy appears to have been discontinued after 1999.

This pencil is based on the P1035 Kerry.

The Black & Red use the Traditional Check pattern on the bottom of the cap. The Navy, of course, uses the Navy Check pattern.

Pentel Pencils Identification Book

Burberry BEP12† "Kerry" Automatic Pencil

† (Tentative Designation)

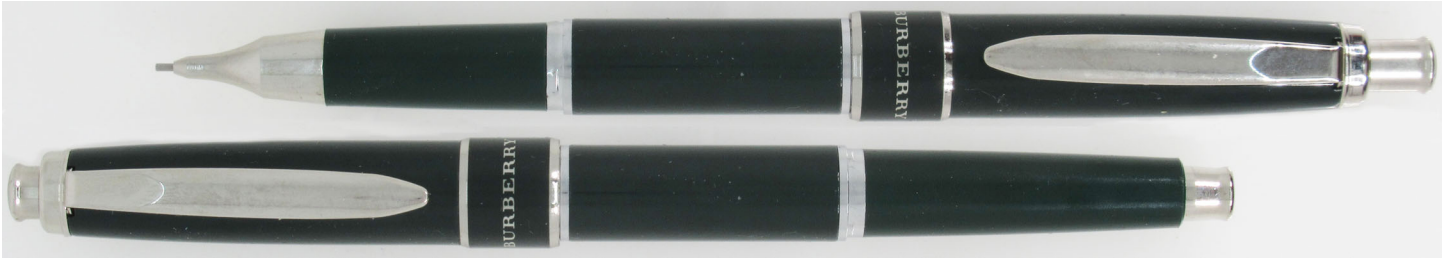

Image Source Jimmy Simpson

Size	0.5
Base Colors	Forest Green
Years Available	2000's
Mfg Country	Japan
Dist Country	Worldwide
Dimensions	Overall [Capped / Posted / No Cap]: 136.6mm / 140.7mm / 120.8mm Cap [Capped / Posted]: 61.2mm / 65.5mm Reservoir Cap: 6.0mm Body, Back: 37.3mm Body, Center Ring: 32.1mm Grip: 26.9mm Tip: 18.9mm

These pencils were a collaboration between Pentel and Burberry, a specialized clothing brand. In 1999, Burberrys of London changed their name to Burberry. I only find that this pencil has the later Burberry logo.

This pencil is based on the P1035 Kerry.

I have never found another Burberry of this particular design, so I do not know for sure that this is the model number.

Pentel Pencils Identification Book

Burberry BEP13 Islington Automatic Pencil

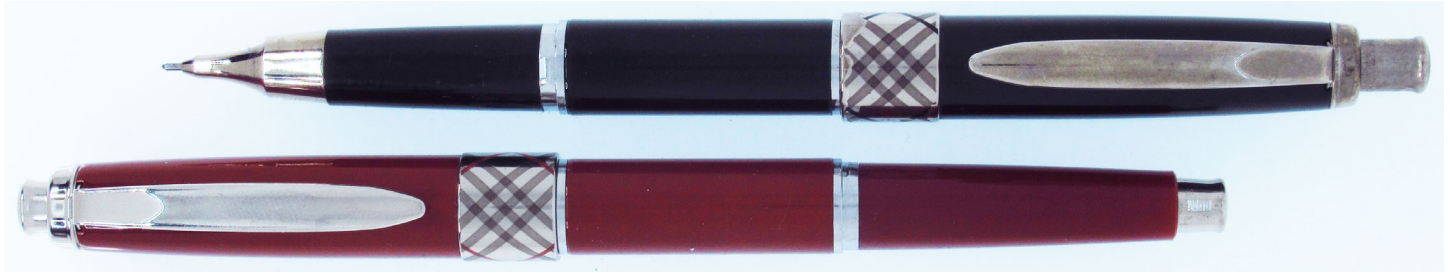

Image Source Jimmy Simpson

Size	0.5
Base Colors	A Black / B Red
Years Available	2000's
Mfg Country	Japan
Dist Country	Worldwide
Dimensions	Overall [Capped / Posted / No Cap]: 136.6mm / 140.7mm / 120.8mm Cap [Capped / Posted]: 61.2mm / 65.5mm Reservoir Cap: 6.0mm Body, Back: 37.3mm Body, Center Ring: 32.1mm Grip: 26.9mm Tip: 18.9mm

These pencils were a collaboration between Pentel and Burberry, a specialized clothing brand. In 1999, Burberrys of London changed their name to Burberry. Aside from the band at the bottom of the cap, this is the same design as the previous Unknown Burberry, so I assume it is from the 2000's.

It does not say Burberry(s) anywhere that I can see on the pencil, but the eraser cap has the Equestrian Knight logo (apparently in use between 1999 & 2018).

This pencil is based on the P1035 Kerry.

Base Colors White with characters (Caps: Blue / Pink)
Donald, Mickey and nephew
Lady and the Tramp
Mickey Mouse
Jungle Book
Snow White

Years Available Late-60's to early-70's

Mfg Country Japan

Dist Country Japan

Price Tags ¥100

Originally, designated Disney Sharp, since that is all it was called in the Japanese 1970 One-Sheet catalog. In April 2022, an auction came up with a packaged Snow White version that said it is a model D109, which makes sense, since there was a very similar looking S-105 pencil shown in there as well.

The Japanese printing on the side says "Pentel Disney Sharp."

Pentel Pencils Identification Book

Disney P565 Set 1 Character Automatic Pencil

Image Source Jimmy Simpson

Size	0.5
Base Colors	Clear transparent body with colored lead reservoir Red / Pink / Orange / Yellow / Green / Blue
Years Available	1977
Mfg Country	Japan
Dist Country	Japan
Price Tags	¥500
Dimensions	Overall: 141.2mm Eraser Cap: 11.0mm Body: 112.0mm Tip: 18.2mm

In addition to the 6 color reservoirs, these pencils had 6 different character stickers that were stuck to the reservoirs.

Large Mickey Mouse
Mickey Mouse running with letter
Large Minnie Mouse
Minnie Mouse waving
Donald Duck
Goofy

After several years of cataloging this under a couple of different model numbers, some auctions came up with packaged versions of these pencils, definitively identifying them as model P565. Based on the Popeye pencils in tray with the model number P565ST2 (figuring the ST2 means Set 2) on it, I have settled on the model P565 Set 1.

These pencils have one of the earliest versions, that I have found, of the 2-character Date Code that was printed on the character sticker that wrapped around the lead reservoir. All known Date Codes are between 6L and 7F, which should be December, 1976 to June, 1977.

Tip: 22.4mm

Unknown until it was pointed out to me on a Japanese auction site.

The only differentiation easily visible on these pencils is the size on the top of the cap.

Pentel Pencils Identification Book

Muji (PG510) Balanced 0.3mm / 0.5mm Mechanical Pencil

Image Source Jimmy Simpson

Size	0.3 / 0.5
Base Colors	White / Black / Red / Blue / Orange
Years Available	White - Late-2000's to Current Black - 2023 to Current Red/Blue/Orange - 2024 to Current
Mfg Country	Japan
Dist Country	Japan
Dimensions	Overall: 147.7mm Eraser Cap: 15.6mm Body: 78.1mm Grip/Tip: 54.0mm

These pencils are sometimes known as the Muji Low Center-of-Gravity pencils.

The only differentiation easily visible on these pencils is the size on the top of the cap. The original White and Black have a matt finish on the grip (like the PG510 series) and the new colors have the shinier tip (like the PG520 series).

Apparently when it was first released, this was released in a Gray body.

Size 0.5
Base Colors Striped
Red / Blue / Green / Yellow
Years Available 1991
Mfg Country Japan
Dist Country Japan

These pencils were a collaboration between Pentel and Person's, a specialized clothing brand.

Based on a Timeline from a presentation by Pentel, this looks to be a PQ7 pencil, released in Heisei 3 (1991).

Pentel Pencils Identification Book

Person's Collection PQ8 (Type 1) Mechanical Pencil

Image Source Jimmy Simpson [1] | <https://auctions.yahoo.co.jp/jp/auction/1232690186> (yosshy43) [2]

Size	0.5
Base Colors	Yellow/Purple / Red/Green
Years Available	1991
Mfg Country	Japan
Dist Country	Japan
Dimensions	Overall: 141.2mm Cap: 42.3mm Body: 76.7mm Tip: 22.2mm

These pencils were a collaboration between Pentel and Person's, a specialized clothing brand.

I have not seen this pencil before. There is also a Person's Collection PQ8 with a flag body that was released in 1992.

This pencil is date stamped 1A, leading me to believe it was made in January 1991. Since I see the flag body more often in auctions, I believe this may have been an early release that was later replaced by the flag version.

Pentel Pencils Identification Book

Person's Collection PQ8 (Type 2) National Flag Mechanical Pencil

Popeye P565 Set 2 Character Pencils

Image Source Jimmy Simpson

Size	0.5
Base Colors	Clear transparent body with colored lead reservoir Red / Pink / Orange / Yellow / Green / Blue
Years Available	1980
Mfg Country	Japan
Dist Country	Japan
Price Tags	¥500
Dimensions	Overall: 141.2mm Eraser Cap: 11.0mm Body: 112.0mm Tip: 18.2mm

In addition to the 6 color lead reservoirs, these pencils had 6 different character stickers that were stuck to the lead reservoirs.

Popeye walking with Olive Oyl

Popeye pleading to Olive Oyl

Olive Oyl dreaming of Popeye

Popeye & Bluto

Popeye getting beat up by Swee'Pea

Popeye with sea-bag

The Popeye models were identified by several trays that have popped up, marked as manufactured in 1980, with the model P565ST2 on them, which I interpret as P565 Set 2.

Pentel Pencils Identification Book

Windom Clock Pencil

Image Source Pearsonified [1-3] | Jimmy Simpson [4]

Size 0.5
Base Colors Red Marble / Blue Marble / Brown Marble / Silver
Years Available 1980's
Mfg Country Japan
Dist Country Japan

One of the digital clock pens/pencils that were popular in the 80's. I believe these were manufactured by a third party and marketed for Pentel.

The Pencil does not say Pentel on it, but on the back (opposite the clip), it has 0.5 over Japan in a Pentel font.

There is a Pen version that on the back says (on the red marble version) "Pentel BWD1" over Japan. I am not sure if that would be the same model for the other colors. I suspect that the red marble pencil would be model PWD1.

C P545 (Long) Length: 142mm	Traits: Unique Tip and Ring between Tip and Grip, Space between end of Clip and end of Body is about 1/3 of length of body.
D P545 (Short) Length: 131mm	Traits: Unique Tip and Ring between Tip and Grip, Space between end of Clip and end of Body is about 1/4 of length of body (about size of large triangle sticker).
E Middle 5 Deluxe Length: 131mm	Traits: Fixed Tip, All Silver, Unique "Z" Ring between Body and Grip
F ML5 Length: 130mm	Traits: Fixed Tip, Silver Stepped Ring between Body and Grip, Grip about 1/2 length of Body, Wide space between end of Clip and end of body.
G SG/SV Series Length: 132mm	Traits: Distinctive Tip, All Metal Body and Grip, Ring between Body and Grip, Colors: Silver, Black, Blue, Green, Brown, Gold, Black w/ Gold trim.
H P505 Length: 116mm	Traits: Fixed Tip, Smooth Grip, Grip about 2/3 length of Body, Narrow space between end of Clip and end of Body (about height of small triangle sticker).

Pentel Pencils Identification Book

Date Codes

As far as I can tell, up until about 1975 (smaller triangle sticker), Pentel did not put any dates on their pencils. You had to date the pencils in other ways; by catalog, stickers/tags, other information on the web, such as the [Good Design Awards](#), etc.

6-Digit Date Code

Then, around 1975, Pentel received their JIS Permit 375127, and their stickers transitioned to the larger triangle price sticker with the JIS Permit number on them. It looks like one thing they had to start doing was dating their products. For the most part, this involved printing the date on the lead reservoir in a 6-digit yymmdd format, the earliest of which I have found is 751200. Sometimes it would be a 5-digit code, looking like it dropped the lead digit of the year. These would have to be dated to the decade with other indicators.

Pentel Pencils Identification Book

2-Character Date Code

At some point, Pentel decided to go to a more compact Date Code and came up with a 2-character code in a number-letter format. The number would be the last digit of the year, and the letter would be between A and L, representing the months of the year (A = January, B = February, etc. up to L = December), usually upper-case, but not always.

This is fine for dating lots of pencils that did not have multi-decade productions, but on pencils such as the P205, a 4D could mean April 1994, April 2004 or April 2014. Unless you had other information about the pencil, that was as far as you could go. Smaller productions, such as the DP325 Disney pencil (the earliest I have seen this version of the Date Code used) appears to have all Date Codes that we know of between 7C and 7F. With other indicators, such as the mold marks on the body of the pencil and the type of lead reservoir used, I believe these to be March to June 1977.

When under the clip (A, B, C, D, G), some of the codes are easy to read, but some (A & C) can be harder, depending on how deep the code was imprinted. Image C of a PD345 is hard to read, but I believe it says 6L, which would probably be September 1986, since I purchased it in the late-80's.

In the case of image E, this is a P225 with the code imprinted into the body at the end of the line of text on the side.

Many pencils will have the code printed at the end of the text (image F), as in the case of this PG514.

As I said above, the Disney DP325 has the code printed on the sticker that is wrapped around the lead reservoir.

In some cases, the Date Code is not to be found on the pencils, especially on some of the limited edition colors.

Pentel Pencils Identification Book

Capped Pentel Pencils

This question comes up fairly often online: What pencils are capped?

I decided to put this list together of Pentel Pencils that are capped, along with when they are available. The ones that are in **bold** are ones that are currently available (maybe not in all parts of the world).

There are a couple in this list that may be questionable, but I decided to include based on this question: What is the purpose of a Cap.

To me, a Capped pencil is one where you have a piece that goes over and protects the tip for storage and transport. Generally, this is a separate piece that comes off the front and posts on the rear of the pencil. It is not necessary to be completely enclosed, as the P515 and the PMG are both, just an open-ended metal sleeve that wraps around the tip and will slide onto the rear when the pencil is in use.

Pentel Pencils Identification Book

Graph II vs PG5

Graph II

PG5

This article puts together the images from the Graph II and the PG5 all on one page, so you can see the differences between them without having to flip back and forth over 100 pages.

The original Graph pencil came out in 1965 and was a very successful pencil. In 1968, Pentel released the Mechanica, which, I believe is the first Pentel pencil to have a lead indicator ring. In 1970, Pentel released the PMG, which was based on the Graph body, with a different tip and a cap.

About the same time, Pentel decided to update the Graph, to add a lead indicator ring. They took the Graph and shrunk down the Connector end to add a ring with the lead hardness' and a second window ring. When they shrunk down that end, the lead reservoir would no longer fit through the back end, so they had to take a design from some of the other 60's pencils and had it screw in from the front with a 5mm thread and kept the standard 4mm thread to screw the tip onto. This resulted in the Graph II pencil.

This design was not as production friendly as the Graph, so another redesign was made to make the Connector into a separate piece, allowing the lead reservoir to drop into the back, then the Connector (with lead hardness sticker already applied) to just screw into the back. This design was called the PG5.

There are three external indicators I know of that can help identify the difference between the two pencils. First, is that the Graph II will not have any printed text on it, although some of the very early PG5's did not either. Second, and most likely to be seen on an auction site, is the size of the lead indicator font on the Graph II is larger. The next identifier is hard to see on auction sites, but on both pencils, in one of the cutouts, just behind the grip, is the name Pentel. On the Graph II, it is in the old-style font, and on the PG5 it is the newer font, like on the front of this book.

Pentel Pencils Identification Book

PMG version 1 vs PMG version 2

Similar to the Graph II and PG5, this will show the differences between the Pentel Mechanical Graph (PMG) versions 1 & 2.

The PMG was to be a lower cost follow-on to the Mechanica 0.3mm from 1968, and in 1970, the PMG was first released. Instead of having a twisting grip that would retract the shield around the tip, the PMG had an open-ended external shield that would post on the tip, shielding it, but could then be posted to the back silver extension, behind the lead hardness ring.

The PMG started with a Graph body and was trimmed back to accommodate the lead hardness ring, similar to the Graph II, and probably used the same mold. For the same reason, the Inner Reservoir had to be inserted from the front and screwed into the body with a 5mm thread, leaving the 4mm thread for the Tip to screw into.

Again, this was not as production friendly as Pentel had been moving towards with back drop-in reservoirs. So it was redesigned to remove the Connector, allowing the reservoir to drop in the back, then thread the connector (with the lead hardness sticker already on there) in. Pentel decided in this case to just keep the model number PMG for this redesign.

Really, the only indicator that this might be a Version 1 that I have found, is that the only text on the side is *0.3m/m* in italics. If you can see it, in one of the cutouts behind the grip, the name Pentel is molded into it. On the version 1, it is the old style typeface "PENTEL" and on the version 2 pencils it is the newer Pentel logo.

Pentel Pencils Identification Book

The Story Behind Pentel's Pop'npop Lineup

By Knockologist

The Story Behind Pentel's Pop'npop Lineup

In the neon-colored swirl of 1980s Japan, Pentel's Pop'npop series of writing instruments emerged as a playful icon of the era. These weren't just writing tools – they were fashion statements and collectibles, arriving in eye-popping colors with a catchy name that still sparks curiosity decades later. To understand Pop'npop, we need to dive into the time and place of its birth: the exuberant 1980s bubble-era Japan, when youth culture and “fancy” stationery boomed, and English-sounding names were all the rage. Below, we explore the origins of the Pop'npop branding, its cultural meaning, and its lasting legacy.

Origins in the 1980s: Release and Discontinuation

Pentel introduced the Pop'npop lineup in Japan during the early-to-mid 1980s – the Showa era twilight years. The Pop'npop line seems to have launched in the first half of the 1980s and ran its course by the decade's end, vanishing as the 1990s (and the end of Japan's economic bubble) brought new trends. By now, it is classified as *haiban* (discontinued) and considered a nostalgic collectible of its time.

Determining the exact release year is tricky, but an initial Pop'npop series likely appeared around 1983-1984, with later iterations in the late '80s featuring updated colors and designs. The lineup included mechanical pencils, ballpoint pens, and other fun stationery items. For example, Pentel's Q535 Pop'npop mechanical pencil (a capped “pocket” model) went through two series in the 1980s – an earlier set in solid bright primaries (red, blue, green, yellow), and a later “Series 2” in more translucent pastel tones like blue, green, yellow, pink, and violet. This evolution from bold basics to transparent pastels aligns with mid-'80s trends, suggesting the Pop'npop lineup was refreshed at least once before being phased out. By the early 1990s, as Japan's economy cooled and tastes changed, Pentel quietly retired the Pop'npop range. These writing instruments became fond memories in desk drawers and now occasionally resurface on secondhand markets as *Showa retro* treasures.

Pentel Pencils Identification Book

The Trend of English in Japanese Product Names

During the 1980s, Japan saw a surge in the use of English words in product branding, especially in industries like fashion, music, and stationery. This wasn't necessarily about making products accessible to English speakers—it was about creating a cool, modern, and international feel. Words that sounded catchy or stylish were often borrowed from English, even if their meaning wasn't entirely logical.

Pop'npop is a great example of this decorative English trend. The repetition of "Pop" adds an energetic, playful rhythm to the name, even though it doesn't have a literal meaning in Japanese. This naming style was common across various consumer goods at the time, as brands sought to appeal to younger generations who were drawn to Western pop culture.

Japanese marketers often chose English phrases that sounded fresh and lively, regardless of grammar or sense. This can be seen in everything from snack foods to fashion brands and even music genres like "City Pop." The goal was not linguistic accuracy but creating an aspirational or fun identity—which fits perfectly with the Pop'npop lineup's colorful, youthful appeal.

What's in a Name? The "Pop" Factor

The name Pop'npop is more than just catchy branding—it carries a sense of energy and excitement, much like the onomatopoeia "pop" itself. The word "pop" suggests something lively and dynamic, making it an ideal fit for a vibrant lineup of writing instruments.

Beyond its bright colors, the physical interaction with Pop'npop products may have played into the name's appeal. Many of the mechanical pencils and pens in the series featured mechanisms that involved a popping action—whether it was clicking the top to advance lead, pressing a side button to extend a tip, or even removing a cap with a slight "pop" sound. The Q535 Pop'npop pencil, for instance, was a capped pocket model where users had to pop off the cap before writing, reinforcing the name's playful, sound-like quality.

The repetition of "Pop" in the name further amplifies this sense of movement, making it feel almost rhythmic—like a double pop, suggesting continuous fun. Whether intentional or not, the name evokes both the excitement of using these tools and the physical sensation of engaging with them.

The Mystery of "Pop'npop"

Among collectors, one of the great unsolved mysteries is what Pop'npop actually means. Despite many theories—from it being an onomatopoeia to it representing a "pop" of color—there's no definitive explanation from Pentel. The reality is that we may have assigned more meaning to the name than was originally intended. Like many Japanese products of the 1980s, it was likely just a trendy, fun-sounding name designed to catch attention.

Interestingly, there was a Japanese video game called Pop'npop, developed by Taito in 1998. However, there doesn't appear to be any real connection between the game and Pentel's stationery lineup. The shared name is probably a coincidence, another example of how the phrase "Pop'npop" was catchy enough to be used in different contexts.

Pentel Pencils Identification Book

Echoes of Pop’npop in the U.S.

While Pop’npop was mostly exclusive to Japan, similar trends emerged in the United States in the late 1980s and early 1990s. The vibrant, youth-oriented stationery trend was reflected in products like Lisa Frank’s neon-colored school supplies, which became wildly popular among American children. With bold colors, playful themes, and collectible appeal, Lisa Frank’s stationery followed the same “stationery as self-expression” philosophy that had made Pop’npop a success in Japan.

Other brands, such as Sanrio’s Hello Kitty and Trapper Keepers, also embraced bold, colorful, and highly stylized designs that turned everyday school supplies into fashion accessories. These brands, like Pop’npop, understood that stationery could be a statement piece rather than just a utility, blending functionality with personal identity.

Although the brands were distinct, the underlying cultural shift was similar—both Japanese and American children in the late 20th century sought customized, fun, and stylish school supplies that reflected their personalities. Pop’npop may not have fully reached U.S. shores, but its aesthetic and marketing approach foreshadowed trends that would later dominate American school culture.

Pop’npop’s Legacy: From Retro Collectible to Modern “Pop” Revival

Though the Pop’npop series was discontinued by the 1990s, its spirit lives on in several ways. Pentel’s contemporary catalog features a “Pop series” of pens and pencils, including gel pens named Sparkle Pop, Milky Pop, Solar Pop, and a colorful mechanical pencil set called Quick Click Pop.

Looking Back on a Stationery Icon

The Pop’npop lineup may have started as a fun, trendy product line in 1980s Japan, but its impact continues to be felt today. It represents an era when stationery wasn’t just about function—it was about self-expression, color, and fun.

For those who grew up using these pens and pencils, they are more than just collectibles—they’re reminders of a time when even the smallest items could bring joy. The legacy of Pop’npop proves that sometimes, the most memorable products are the ones that simply made everyday life a little more exciting.

Pentel Pencils Identification Book

Excalibur Crown Pencils & Family

The Excalibur Crown-motif pencils are among my favorite Pentel pencils. Since finding the first two Excalibur pencils (Images 13 & 15) in this article, I wanted to put together as coherent a timeline as I can determine.

This article tries to track the history of, and changes to, the Pentel Excalibur Crown pencils. I am not including any of the pens (other than as side notes) or any of the later Excalibur items, Sword or carved.

Let's start this with what documentation we have. The oldest catalog I have access to that mentions this style pencil is the 1970 Japanese One-Sheet that was included with some pencils. This shows two pencils of this type, the first being a Silver 0.3mm, and the second, a "Gold" 0.5mm.

Image 01: 1970 Japanese One-Sheet – translation: "Sharp Silver / For Extra Fine Writing" – 0.3mm

Image 02: 1970 Japanese One-Sheet – translation: "Sharp Gold / Luxury Portable" – 0.5mm

As the translation for Image 01 states, it is a Sharp Silver, and the image reflects that. Image 02 translation says it is a Sharp Gold but looks to be drawn as a black pencil with lighter (gold) accents and does not have bands on the cap.

Pentel Pencils Identification Book

The next two occurrences come from Pentel of America, in the form of Excalibur pencil and pen set brochures printed in 1971 & 1973.

Excalibur

symbol of excellence
for 13 centuries.

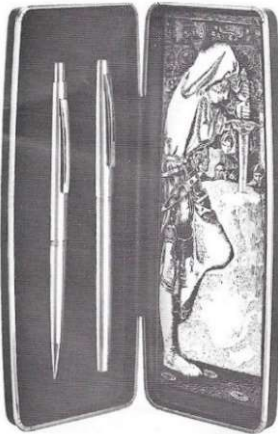

Since Merlin the Sorcerer made the sword used by King Arthur, "Excalibur" has stood for excellence.

And now Pentel introduces a handsome gift set that lives up to this tradition.

The pen is a Rolling Writer that actually improves your handwriting. Thanks to its unique cushioned ball tip, it glides more smoothly, so you can write faster and easier than with any other type of pen. And since the richly colored ink is liquid, it flows the instant the pen touches paper. Rolling Writer... the liquid ink pen that can make carbons like a ball point. Its companion, the Sharp pencil, is also unique. Hand-assembled with watchmakers' tools, it feeds itself. There's no need to reload until a dozen leads have been used. To advance the lead just press the quick-click top. The secret behind the Sharp is an exclusive lead compound called Hi-

Polymer. It's blacker, smoother and stronger than normal lead, so each piece lasts twice as long.

Excalibur by Pentel... the pens and pencils that are indeed mightier than the sword.

To order the Excalibur in a distinctive gift box, just fill in the coupon below:

Quantity	Item	Price	Total
	Brushed chrome Gift set (#EX-15)	\$15.00

Image 03: Excalibur US Brochure 9/71

The 1971 brochure is for the silver 0.7mm P1007 and the R-10 pen in a Gift Set #EX-15. The brochure was included with this Gift Set.

Excalibur!

Excalibur, symbol of excellence for 13 centuries, lives again. This distinctive Pentel line is far mightier than the original Excalibur, King Arthur's sword. The current version has more amazing features than Merlin the Magician ever heard of.

The pen is the Rolling Writer, the liquid ink pen with unique cushioned ball tip. It's this unique cushioned ball tip that makes the liquid ink flow smoother, easier, faster. Its ink has richer color. And the Rolling Writer's durable ball tip makes excellent carbon copies.

The world's finest automatic matching Sharp pencil uses Pentel's Hi-Polymer 0.7mm EXTRA-FINE lead, 40% thinner yet stronger than regular fine lead. The pencil feeds itself. There's no need to reload until a dozen leads are used.

Available in two models: rich midnight finish, gold filled trim, \$8.50 for pen or pencil, \$17.00 for the set; luxurious hairline brushed chrome, \$7.00 for pen or pencil, \$14.00 for the set.

Whichever model you choose, you'll be selecting truly unique writing instruments, for yourself or cherished gift.

Image 10: Pentel of America 1985 catalog, pg. 5 Excalibur Pens and Pencils

Pentel Pencils Identification Book

Image 11: Pentel of America 1985 catalog, pg. 5 Excalibur Gift Sets

One thing to note, although they contain the same model number pen and pencil (R10 & P1007), the EX12 Gift Set model number changed from the 1971 Excalibur Brochure (Image 03), where it was EX-15.

Because the 1984 Olympics were being held in the United States (Los Angeles, California), Pentel of America decided to release several pens and pencils tied into that event. Several different styles of pencils were released, but for this article, we are only concerned with the EX20WO set and the PX7-21WO pencil.

Image 12: Pentel of America 1984 catalog, pg. 5 EX20WO Excalibur Olympic Pen and Pencil Gift Set

Apparently, there were many of these sets released, as even today in 2023, you can still find these relatively cheap on auction sites.

Pentel Pencils Identification Book

Going back to the first appearance in the 1970 Japanese One-Sheet, we have the Sharp Silver (SV) 0.3mm (Image 01) and the Sharp Gold (SG) 0.5mm (Image 02). These have now been confidently identified as the following two pencils:

Image 13: Unmarked SV

I came across some pictures of Pentel Excalibur and SG/SV pencils from a collector who is no longer with us, Germ of the Pencils11 blog (bit.ly/Excal11). One of these pencils appears to be an unmarked silver pencil that is probably the pencil from the Japanese 1970 One-Sheet (see Image 01). Aside from the external differences from the SV (see Image 28) (no text below the clip, the early clip with vertical type Pentel, the stylized "P", and the early eraser cap), the internals have a major difference that links them back to the 60's design where the lead reservoir screws into the front of the grip with larger diameter threads than those that screw the tip on.

Image 14: Differences between internal Unmarked SV and "3" SV

Image 15: SG (Sharp Gold)

I found out about the above pencil in an auction that I subsequently won. According to the box, it is a Sharp Gold (SG) and the shipping box says to come see Pentel at EXPO70. This is the pencil from the Japanese 1970 One-Sheet (Image 02). It has no markings below the clip, like the SV (Image 13), and is longer than all other SG/SV pencils by about 7mm. Other differences include the smooth eraser cap and the single piece tip (no pressed in pipe).

Soon after this, the Excalibur pencils seem to split into 3 different lines: the Crown-motif Excalibur pencils, the SG/SV pencils, and the Scepter pencils.

Pentel Pencils Identification Book

Excalibur (SG-style) Pencils

The first appearance of actual US Excalibur Crown pencils has been identified on websites, and now in the hands of collectors.

Image 16: First Silver Excalibur / P1007 (US)

Image 17: First Black Excalibur / SG7 (US)

But in neither case, did we have model numbers, and in previous Pentel ID Books they were identified as Unknown Model 11 & Unknown Model 08. To get to how these were identified, let's look at the model numbers of the more modern (circa 79-85 US Catalogs) Excaliburs.

First off, you need to know that in Japan, all Excaliburs were 0.5mm, and in the US and the rest of the world, they were 0.7mm, thus the different model numbers, but I never understood where these numbers came from for the US models (except the Gold Excalibur). The UK model numbers followed the Gold Excalibur format.

PX20 / P1007 / PX7-20

This is the brushed silver Excalibur with black print.

Image 18: PX20 (0.5mm), P1007/PX7-20 (0.7mm)

All versions of this pencil also came in boxed sets with Rolling Writer pens. The Japanese set with the PX20 and the RX20 was PRX20, the US set with the P1007 and the R10 is EX12 (see Image 11) and the UK set with the PX7-20 and the RX20 was the EX20 (see Image 07). As a note, the RX20 & R10 pens are the same, just with different model numbers, depending on the country.

Pentel Pencils Identification Book

PX21 / PX7-21

This is the brushed gold Excalibur with black print.

Image 19: PX21 (0.5mm), PX7-21 (0.7mm)

All of these pencils came in sets with the RX21 Rolling Writer pen. The Japanese set is the PRX21, the US set is the EX20 (as opposed to the UK Silver EX20 set), but the UK Gold set is EX21 (see Images 11 & 07).

PX22 / SG7 / PX7-22

This is the gloss black Excalibur with gold trim and print.

Image 20: PX22 (0.5mm), SG7/PX7-22 (0.7mm)

Both pencils came in sets with Rolling Writer pens, with the PX22 (0.5mm) / RX22 being the PRX22 Japanese version and the SG7 (0.7mm) / RG10 being the EX17 US version (see Image 11), with the UK version being EX22 (see Image 07). Again, the RX22 and the RG10 pens are the same, just with different model numbers.

For the US Gold Excalibur and the UK Excaliburs, it is easy to see where the model number came from, taking the PX21 and sticking the “7-”, for 0.7mm, in the middle. Same for the UK PX7-20 & PX7-22. This seems to indicate that these Excaliburs all came out at the same time.

Now, it is easy to see that the Japanese model numbers were created sequentially (PX20, PX21 & PX22), but where did the US silver (P1007) and black (SG7) numbers come from? Neither I, nor any of the other pencil collectors I was in contact with had any idea.

Pentel Pencils Identification Book

P1005 and the ANSWER

Image 21: P1005

But in mid-April 2023, an auction went up on Yahoo Japan for a box of P1005 Excaliburs. Aside from being 0.5mm, they were identical to the first US Silver Excalibur (Image 16), which made that model number **P1007**.

And everything starts to fall into place. The first US Excalibur was the Silver P1007 (non-SV version). This also made the first Black Excalibur, very likely, an SG7, where Pentel of America, just tacked on a “7” to the 0.7mm version of the SG (Image 17).

This now tells us where Pentel of America got their model numbers from. The first Silver Excalibur / P1007 was replaced by the 0.7mm version of the PX20, but they kept the same model number. And the same thing probably happened with the first Black Excalibur / SG7 with the 0.7mm version of the PX22; they kept the model number SG7.

These early model numbers have been confirmed by the 1971 & 1973 Excalibur brochures (Images 03 & 04).

The Oddball “Excaliburs”

Image 22: P1007 (Version 2) “Excalibur”

Image 23: SG7 (Version 2) “Excalibur”

The two pencils above, what I am calling P1007 (Version 2) & SG7 (Version 2), were pencils I received in Excalibur sets (with Excalibur marked pens). Being 0.7mm models, they are US versions and marked with a 7, but I wondered: 1) why I had never seen these model numbers before, and 2) why they were not marked as Excaliburs.

I have two of these SG7 pencils; one being the one in the photo above, and the other is part of a monogrammed set (proving that they went together) for The Mitsui Bank of California, which appears to have opened in 1974. I suspect that this Excalibur set was a give-away for either employees or high value customers. Either way, that gives us a rough date for both sets.

What I suspect is that Pentel of America was running out of the first Excaliburs, but Pentel Japan had not finished the design for the new Excalibur pencils (PX20 & PX22). Therefore, I believe that Pentel of America had a run of the SV and SG15 pencils made in 0.7mm and stamped with a “7” as a stopgap and was thus a very limited release.

As an aside on the early Excaliburs, we know that the first Excalibur in Silver was the P1005/P1007, and the first Black US Excalibur was the SG7. I suspect that Pentel Japan did release an SG5, but I have not seen any of these show up on auction sites, nor seen any mention of them anywhere.

Pentel Pencils Identification Book

The Prototype?

In early 2024, a “new” Excalibur showed up on Twitter that was most unusual. I managed to trade for it and added it to my collection.

Image 24: P1005 Excalibur “Prototype”

This pencil has an Excalibur logo that I had never seen before (actually, I just did not notice), with the Crown over Japan. This is a thicker crown than the later P1005/P1007 Excaliburs. The reason I believe the above pencil is a prototype is, aside from the extreme rarity, is that this thicker crown was causing distortions, since it had to displace more metal when stamped.

The reason I said I had not noticed the logo before, was because it turned out that the picture of the R10 pen on the back of the 1973 Excalibur brochure (see Image 04), has the same logo. It was not unusual for Pentel to use a prototype for images in brochures and catalogs.

SG/SV Pencils

The SG/SV Pencils appear to be a descendant of the original Sharp Silver (SV) (Image 01) and Sharp Gold (SG) (Image 02) from the 1970 Japanese One-Sheet and have the same “gear-style” middle ring, plus the information below the clip, consisting of Pentel, then the stylized number representing the size, then below that, Japan, and nothing on the clip.

SG15

This pencil is the same color of matt black with gold trim as the pencils in Image 15 & Image 17, but with the 5 stamp on the front.

Image 25: SG15

The Japanese 1980 catalog (Image 08) lists this as the SG15 and I have seen it referenced this way elsewhere online. The sticker on the SG15 above is from about 1976 to the early-80’s.

SG65

This pencil is listed in the 1980 Japanese catalog (see Image 08) as the SG65.

Image 26: SG65

Although, not as brilliant as the SG75, it is a brushed solid gold color.

Pentel Pencils Identification Book

SG75

The last of the SG pencils listed in the 1978 UK Christmas Catalogue (see Image 06) and the 1980 Japanese catalog (see Image 08).

Image 27: SG75

This is a gloss gold pencil with black pin stripes. The SG75 pencil also came in a set with the R7 Rolling Writer as set GS-2 in the UK 1978 Christmas catalog. I have been told that the striping on this is sometimes referred to as Tiger Stripes.

SV / SV5

These pencils are all made of brushed aluminum.

Image 28: SV Silver, SV5 Silver, SV5A Black, SV5C Blue, SV5D Green & SV5E Brown

These pencils are commonly called the SG33, SG35 & SG45, and for a long time, that is how I had them listed. I have always questioned why they were called SG when they are not Sharp Golds but are based on the Sharp Silver (Image 01).

In the Japanese 1980 catalog (see Image 09) the silver pencils appear to be the ones listed there as SV and SV5. The SV is one of the most common SG/SV pencils that I find on auction sites. I have found this pencil with the early smaller triangular sticker (pre-76) to larger JIS triangular sticker up to the square sticker from the mid-80's.

I recently came across a photo of a box of the Green pencils in an SV5 box with the Green "D" sticker on the end, thus confirming these to be SV5 pencils. I also now own a box of the Brown pencils in an SV5 box with a Brown "E" sticker.

I suspect that these pencils picked up the SG33/SG35/SG45 numbers due to some of the other Pentel sets, such as the Pentel Slim (PS35, PS45 & PS65). Since there was little documentation of the SV/SV5 model numbers, and the SG series has the SG65, my guess is that people assumed that these were SG33/SG35/SG45, and that is the now common model number discussed for these pencils. Since the SV5 color pencils were not listed in the 1980 catalog, and all of the date codes I have found for these are 1978 or prior, they were probably discontinued by that point.

Pentel Pencils Identification Book

Scepter Pencils

The first Silver Excalibur in Image 16, thanks to the ring in the middle, appears to be a direct ancestor of the Scepter pencils.

Image 29: Scepter Pencils, top to bottom; Silver Plated, Gold Plated and Sterling Silver

These pencils have dropped the Excalibur logo, and have the Pentel name on the clips, but not the stylized “P”. The Gold-Plated and Sterling Silver versions (bottom two in above picture) did have the name printed on the ring in the middle of the pencil.

The Scepter line had a second run, with minor changes to the tip, clip and eraser band, but appears to have been discontinued after that run of pencils.

Pentel Pencils Identification Book

Evolution of the Excalibur Crown Logo

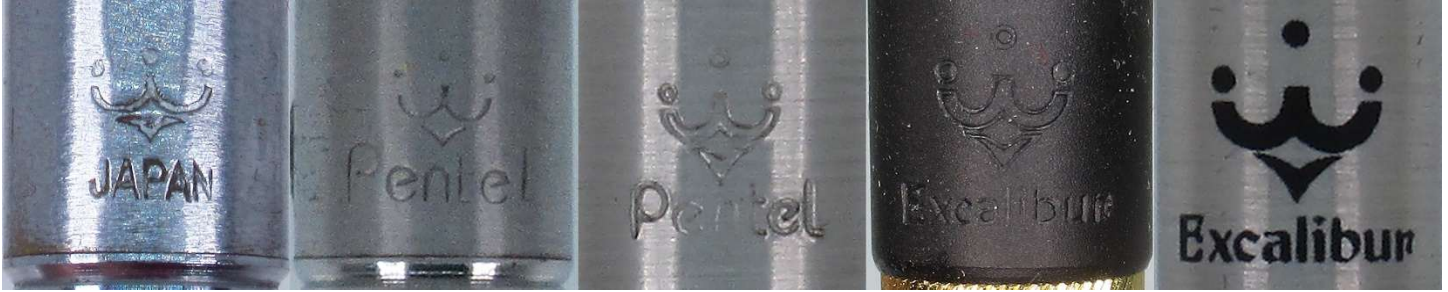

Image 30: Evolution of the Excalibur Crown Logo

Logo 0 – This is a thick line drawing of the Crown above JAPAN. I believe that this turned out to be too thick a stamp, as it probably distorted the metal too much, as can be seen by the reflected light around the crown. I believe this is the logo used on the prototype P1005 & R10. (source P1005 Excalibur Prototype)

Logo 1 – Simple line drawing of the Crown above the logo-style Pentel, stamped into the body of the pencil/pen. (source Early P1007 Excalibur)

Logo 2 – Outlined Crown above the logo-style Pentel, stamped into the body of the pencil/pen. (source R10 Excalibur Gen 1)

Logo 3 – Outlined Crown above Excalibur name, stamped into the body of the pencil/pen. Pentel stamped on the back of the pencil/pen. (source RG10 Excalibur Matt Black)

Logo 4 – Filled Crown above Excalibur name, printed on the body of the pencil/pen. Black fill on Silver and Gold, Gold fill on Gloss Black. (source Late P1007 Excalibur)

Pentel Pencils Identification Book

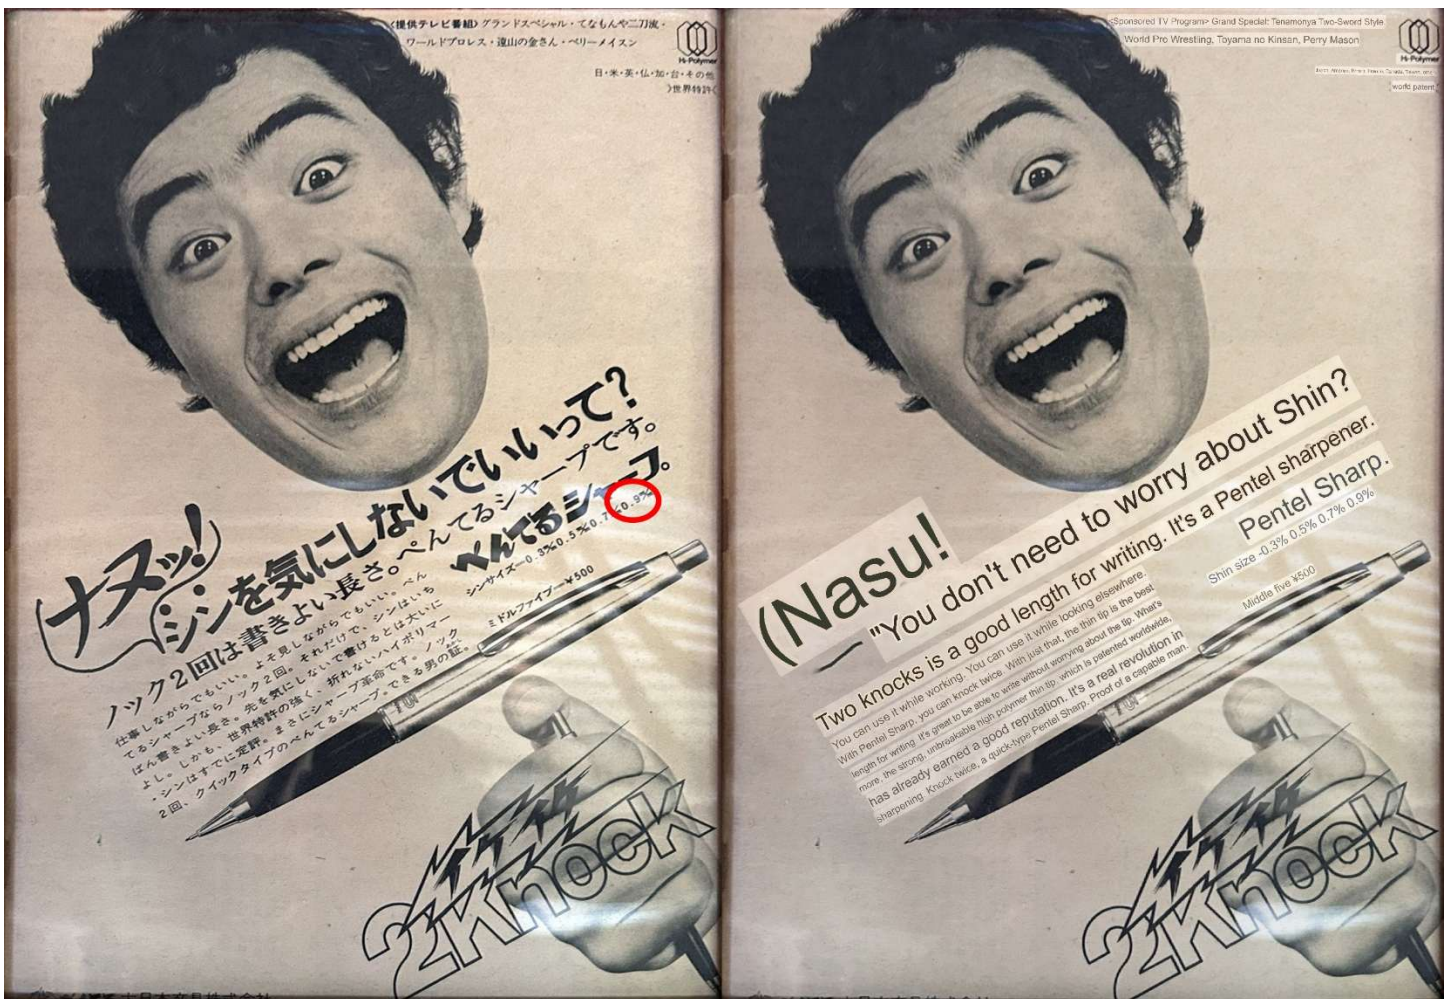

“Missing” Pentel Pencils

Over the years I have found clues to Pentel pencils that I have never actually seen. Of course there are some that are listed in catalogs, and in this book, that I have never seen in the wild, such as the PH12 Lead Holder and the PS255 Sliding Sleeve Colored Lead pencils.

But this article is not about those pencils. This article is about pencils that I have seen a mention in an advertisement or a patent filing or inferred existence. I will present the evidence I have for their existence and hopefully someone, somewhere has seen these pencils, and can contact me with pictures or other evidence of “missing” pencils.

ML9 – Middle 9 pencil

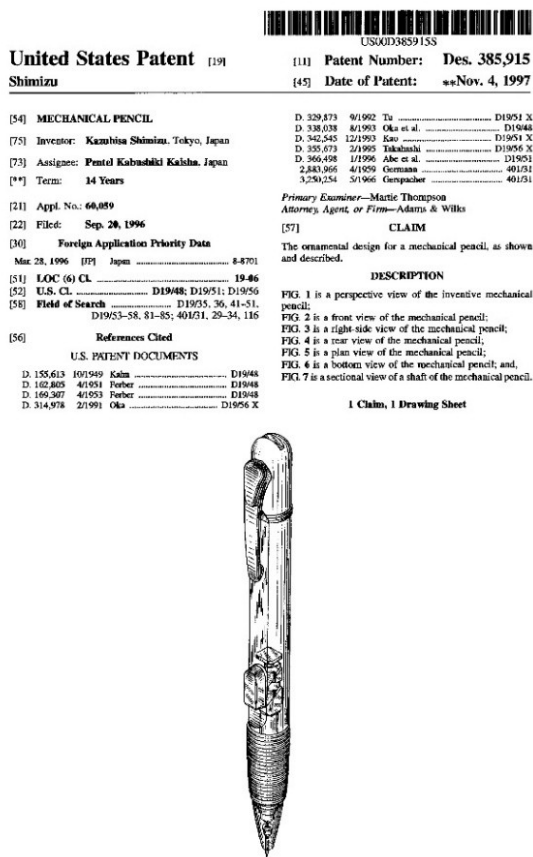

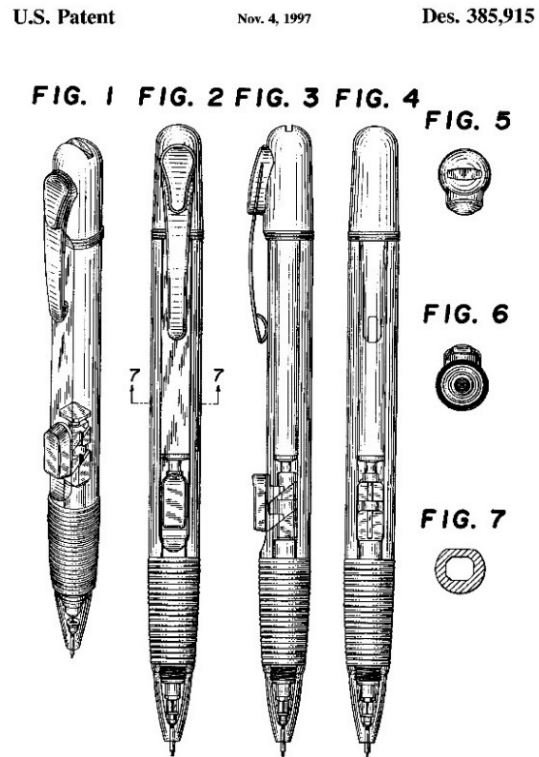

For a long time, we knew about the ML3 and the ML5, then a couple of ML7 pencils turned up. Recently I found some pictures online of old advertisements for the “2-Knock” Middle Pencil. In the advertisement, it showed lead sizes for all four sizes, 0.3mm, 0.5mm, 0.7mm and 0.9mm (circled below). This is the first and only place I have found this size Middle pencil mentioned. There are 2 other ads I have found, but they have substantially, the same text. I believe these are from the late-1960’s or early-1970’s.

Pentel Pencils Identification Book

PD??? – Techniclick pencil (without rubber grip)

For the other two pencils in this article, I know what the designation of the pencil should be (ML9 & SG5), but this one I do not know much more than what the US Patent (USD 385,915) showed.

USD 385,915 patent

As you can see, this pencil appears to be a variation of the PD305T Techniclick G but does not have the rubber grip. In Fig. 3 above, you can see that this has the metal clip of the PD305T, but it has the ribbed plastic grip more reminiscent of the Pianissimo pencils.

PD305T Techniclick G – with metal clip and rubber grip

PD205 Pianissimo with plastic clip and ribbed plastic grip

I have found several other US patents for Pentel pencils, including one for the PD305T Techniclick, so this is not just a bad drawing of that pencil. I can't see Pentel applying for a patent for a pencil that did not exist, since these are just identification patents, not what I would call a design patent for a new part of a pencil.

Pentel Pencils Identification Book

SG5 – Excalibur Pencil (Japanese Matt Black with Gold Trim)

This pencil is inferred from the fact that all Export (0.7mm) Excalibur pencils had a Japanese (0.5mm) counterpart.

This would be the early-1970's version where the logo is stamped into the body of the pencil.

Japanese Domestic (0.5mm)

P1005

"MISSING"

SG5

Pentel Pencils Identification Book

Possible Release Order of Early-1960's Pentel "Stick" Pencils

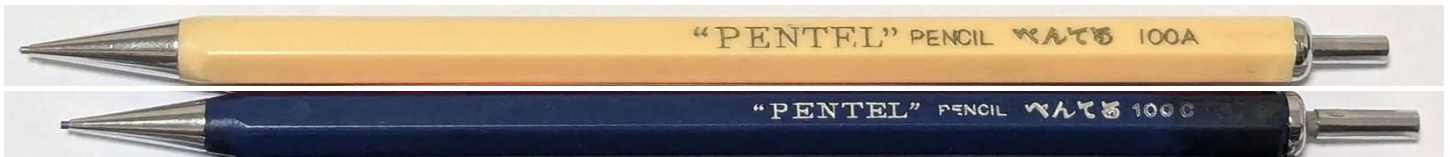

I have started trying to research the Pentel pencils from the 1960's and when they were released.

For this post, I am concerned specifically with the 100, 101, 102, 111, 271, 350 ,850 ,851, PS-100 & PS-350 "stick" pencils.

I decided to look at the style of the text on the side to see if this made any kind of sense for estimating a Release Order, and I am asking other readers to check my thoughts.

I do not have any hard dates to put on these release orders, other than 1960 for the 100 and 1962 for the 850 (probably), so these are my best guesses for 60+ year old pencils.

RELEASE ORDER 1 & 1A

"PENTEL" PENCIL ぺんてる 100A [Long version of the 100]

"PENTEL" PENCIL ぺんてる 100 C [Short version of the 100]

Release 1 - Generally acknowledged as the first Pentel mechanical pencil released in 1960, the model 100 has Pentel in Quotes, Pencil and Pentel again, this time in Japanese, then the Model Number and the color code without a space.

Release 1A – Assuming the short version of the pencil to be released second, this pencil uses the same format as the Release 1, with the exception that there is now a space between the model and the color code.

The model 100 came with a removable clip (not shown), that carried over to the PS-100.

Pentel Pencils Identification Book

RELEASE ORDER 2

"PENTEL" 101 C

"PENTEL" 271 D 0.7mm (Early Version of the 271)

"PENTEL" 850 E 0.5mm

This is at least 1962, as that is when the 0.5mm (and probably 0.7mm) lead was released by Pentel.

"Pencil ぺんてる" has been dropped. The model number and color code have space between them. Since they now had multiple lead sizes they added the size to these models, leaving the 0.9mm blank.

Of these, I believe that the 850 was actually released first, since it has the removable clip, like the 100. Then Pentel went to the fixed clip for all pencils until the PS-100. This clip is different from later removable clips, in that the PENTEL type appears at the top, not the bottom of the clip, like all other clips for "stick" pencils.

RELEASE ORDER 3

"PENTEL" 271 A 0.7mm (Late Version of the 271)

"PENTEL" 851 E 0.5mm

Same style as above (space between model and color code), but the size is now in italic script.

The 851 now has the common fixed clip that most other stick pencils have.

Pentel Pencils Identification Book

RELEASE ORDER 4

"PENTEL" 102A

"PENTEL" 111C 1.1MM

Space between model number and color code has been dropped. Size still in italic script.

I am not sure about what type of clip the 102 had, as this looks to have been modified and does not appear to have the original reservoir cap.

RELEASE ORDER 5

PENTEL 350D 0.5mm MADE IN JAPAN

PENTEL 350E 0.5mm MADE IN JAPAN

No Quote Marks. No Space. No Italic Script. Now says MADE IN JAPAN. I suspect this may have been added to break into the overseas markets. Due to the text on the side being foil imprinted, the 3 (in 350) sometimes looks like an 8 and is sometimes listed as an 850. For the same reason, the 350D is sometimes misrepresented as a 3500 (with 2 zeroes).

RELEASE ORDER 6

PENTEL Sharp 5 (0.5mm) PS-350 JAPAN

PENTEL Sharp 5 (0.5mm) PS-350 JAPAN

All new text layout, including the "Sharp 5" and PS- (Pentel Sharp?) in front of the old model number. Now just JAPAN instead "Made in Japan". Color code has been dropped from the side.

Pentel Pencils Identification Book

RELEASE ORDER 7

PENTEL Sharp 9 (0.9mm) PS-100 JAPAN

PENTEL Sharp 9 (0.9mm) PS-100 JAPAN A6

Same text as above, but this pencil now has space for an eraser, however the reservoir is still for a single stick of lead.

The top pencil has foil embossed text on the side, whereas the brown one on the bottom has it molded into a recess on the side with the addition of a mold mark (in this case, A6). I believe that the bottom pencil is the later version of the two, since going forward, the Pentel 11 was also molded text.

Pentel Pencils Identification Book

Versions and Generations of the Pentel Eleven

Since Pentel also had a Sharp 5, Sharp 7 & Sharp 9 that were 0.5, 0.7 & 0.9 mm respectively, it has been speculated that this was called the Sharp 11 because of it originally including a 1.1 mm size. Some people have also speculated that it was called the Sharp 11 because of the 11 sides of the pencil; they are wrong, since the pencil has 12 sides. I have taken to calling this the Pentel 11, because that is what is written on the side of the pencil, and what people may be looking for in auction sites.

In researching the pencils from the 1960's, I found a Korean blog (<https://m.blog.naver.com/legoking55/221752455499>) that covered 3 generations and the two versions of the Pentel 11.

I also reviewed Pdunc67's Pentel 11 video (<https://www.youtube.com/watch?v=g6H3jHGyt1o>) and he covered 3 different generations and the versions of the Pentel 11. There were also discussions of the eraser that came with the first versions.

I started comparing my Pentel 11 pencils to what these showed and found that the 4 generations of pencils that I own (original Pentel 11, not the S30x) match up to both versions. I decided that I would like to write up what I see as the 4 generations of Pentel 11, plus the S30x version.

This is all based on what I have seen and figured out as of my current understanding of an almost 60 year old item.

Pentel 11 Version 1, Generation 1

Currently I own 6 Generation 1 Pentel 11 pencils: top to bottom, 4 0.5 mm, 0.7 mm and a 0.9 mm. All 6 of these pencils have the text "PENTEL ELEVEN 11 MADE IN JAPAN A#", with the A# being the mold mark and the # being the cavity between 1 & 8 (mine are between 2 & 8).

These pencils all appear to have the same characteristics: 2mm pipe on the tip, a flattened clip with PENTEL running down the length towards the bottom of the clip, an eraser cap with the size stamped into it, and an unusual white eraser.

One thing I do own is a set of these pencils. It came boxed up and in a vinyl folder with 3 Pentel 11 pencils, 3 sets of lead (4H, H & HB), an eraser (Ink-Typewriter Pencil Triple Made by Yamakado Size-30), an eraser shield and lead hardness stickers, so you could label your pencils.

Pentel Pencils Identification Book

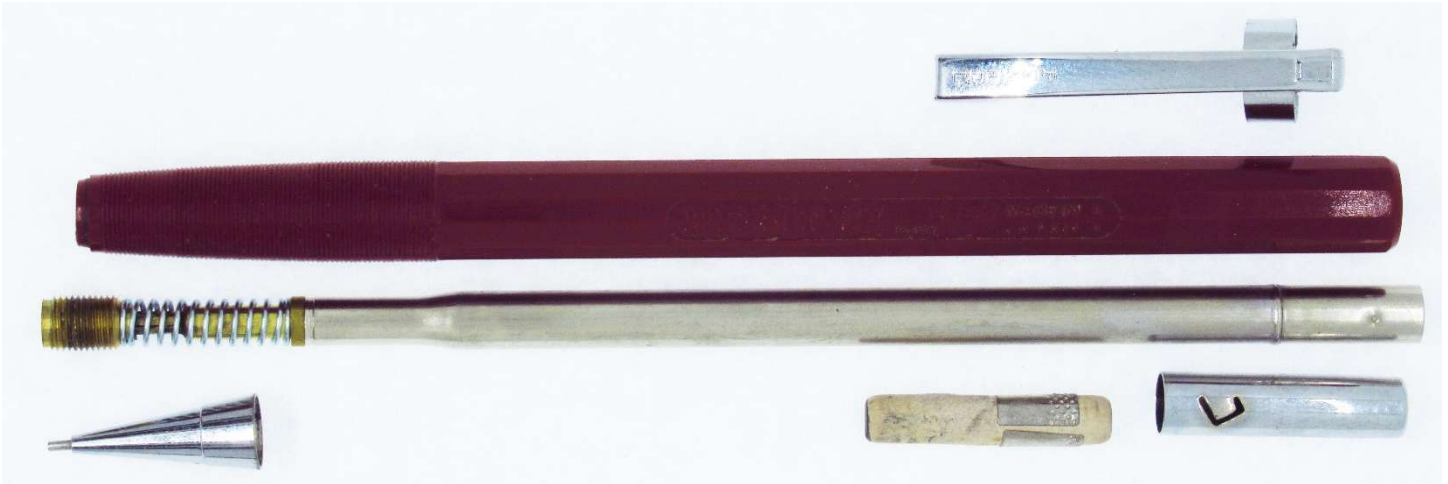

Folder and box front, box back and box top (with flying dragon trademark).

The back translates to "Pentel Main Store Dainippon Stationery Co. Ltd."

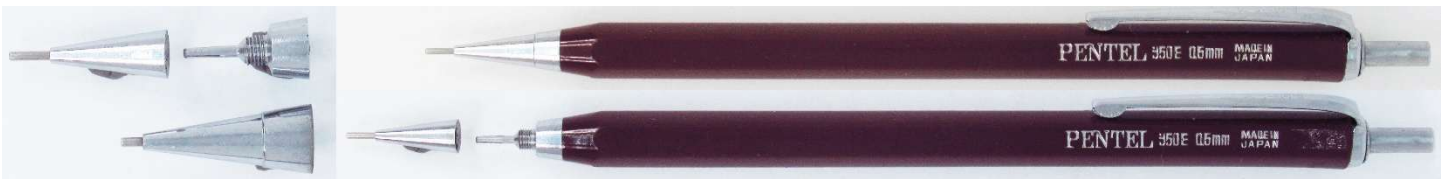

Pentel Pencils Identification Book

Now for the breakdown of the Generation 1 pencil (0.5 mm).

The pencil comes apart into 6 components: the body, interior reservoir, eraser, tip, clip and cap.

Let's start with the Tip. This tip is the kind of stepped tip that has continued on through today with what looks like a base with a slightly narrower tip screwed on to it. I believe that the reason is that is exactly how this type of tip started, with the Pentel 350.

On the right, you see the Pentel 350 put together, and the tip in 2 pieces. On the left you see the 350 tip compared to the Pentel 11 tip above. When put together the 350 tip looks like a "standard" step tip. Most of my other 350 pencils have a standard step tip, which I believe was done so that they looked the same. This carried over to all other pencils using this style tip, the Graph, Pentel 11, P200/P320 series and PG# series.

Of course, as you can see in the two pictures above, the Pentel 11 Generation 1 has a 2 mm pipe compared to the 350 having a 4 mm pipe. Not clearly seen is the thread size on the tip, being 5mm thread (M5-.5).

The Internal Reservoir has a 5mm thread that screws into the body, after being inserted from the rear. This extends out the front to allow the tip to screw on to that same thread. It has a 3-piece brass clutch with a ring that slides out with it and a standard spring up against a brass retainer. Behind this is a metal tube that is the lead reservoir that will, according to the first one-sheet catalogs, "Holds 12 cores at a time", with cores being what we call lead. It has a raised rim just below the eraser end that keeps the cap from being pushed too far in.

All of my Pentel 11 Generation 1 pencils came with the above white eraser, which was probably due to this being one of the first Pentel pencils to actually have an eraser in the pencil. Later Generations would switch to the standard green Z2-1 eraser that would be used up until about 1992.

Pentel Pencils Identification Book

The cap, or eraser cap, is different from future caps in a couple of ways.

As you can see in the image on the above left, the top cap is the Pentel 11 Generation 1 and has an angular cut in that is lightly pressed in to cause a friction fit. The second cap does not have any indentation nor cut, as the reservoir has a bump that causes a friction fit. The bottom cap is a modern P200 eraser cap with an indentation.

On the right is pictures of the end of the caps with the size stamped into it. The 3 pencils in the above set have the top left "5", and the other 3 have each of the others stamped into them.

Pentel 11 Version 1, Generation 2

I only own 1 Generation 2 Pentel 11, in this case a worn yellow 0.9mm. The pencil has the text "PENTEL ELEVEN 11 MADE IN JAPAN B1", again with B1 being the mold mark.

The differences on this Generation are a 4mm pipe on the tip, the more familiar early clip (used on the Graph, P205, etc.) that still says PENTEL running down the length of the clip and an eraser cap that does not have any indentation, nor size on the end. The pencil I have has a green Z2-1 eraser.

I could not break down this pencil completely, since it unscrews out the back, and I could not get a good grip, and the front of the body is slightly damaged and fragile, but I could unscrew the reservoir out the front, so we can see that the front of the reservoir looks the same as the Generation 1 pencil.

Pentel Pencils Identification Book

Aside from the 4mm pipe, the tip is the same as on the Generation 1 pencil with a thread size of 5mm (M5-.5).

The Internal Reservoir also appears to be the same as the Generation 1 pencil with a 5mm thread that screws into the front of the body and into the tip. It has the same 3-piece clutch with ring and the raised rim to stop the cap from being pushed in, along with a raised spot to cause a friction fit with the eraser cap.

This pencil came with a green Z2-1 eraser without a cleanout pin. I suspect that this is the type of eraser that this pencil came with.

The eraser cap is the same as the middle cap in the pictures above, just a straight cap with no indentations and no size stamped in the top.

Pentel 11 Version 1, Generation 3

Again, I only own 1 Generation 3 pencil, black 0.5mm. This pencil reads "PENTEL ELEVEN 11 MADE IN JAPAN B6", with the mold mark B6.

The differences for Generation 3 are back to a 2mm pipe on the tip and the current style removable clip that has Japan on one side of the body grip and Pentel on the other with nothing down the front, like the current generation of Pentel P205 pencils.

Since these clips started coming out in 1971, but the body text still has the old style Pentel, I believe that the body's were probably made in late 1969 or early 1970, but (at least mine) were not assembled until 1971.

This pencil was easy to disassemble due to the redesign of the inner reservoir.

The tip is back to a 2mm pipe, but now is the standard 4mm thread used by P200 & PG5 pencils.

Pentel Pencils Identification Book

The inner reservoir has been redesigned with a split screw on the front. The reservoir screws into the body with the larger 5mm thread and the tip screws onto the 4mm thread. The body of the reservoir is a straight pipe with the lip and raised spot for the eraser cap to slide on.

The eraser is now the standard green Z2-1 eraser with a cleanout pin.

The eraser cap is the same as the previous Generation without any indentations nor markings.

Pentel 11 Version 1, Generation 4

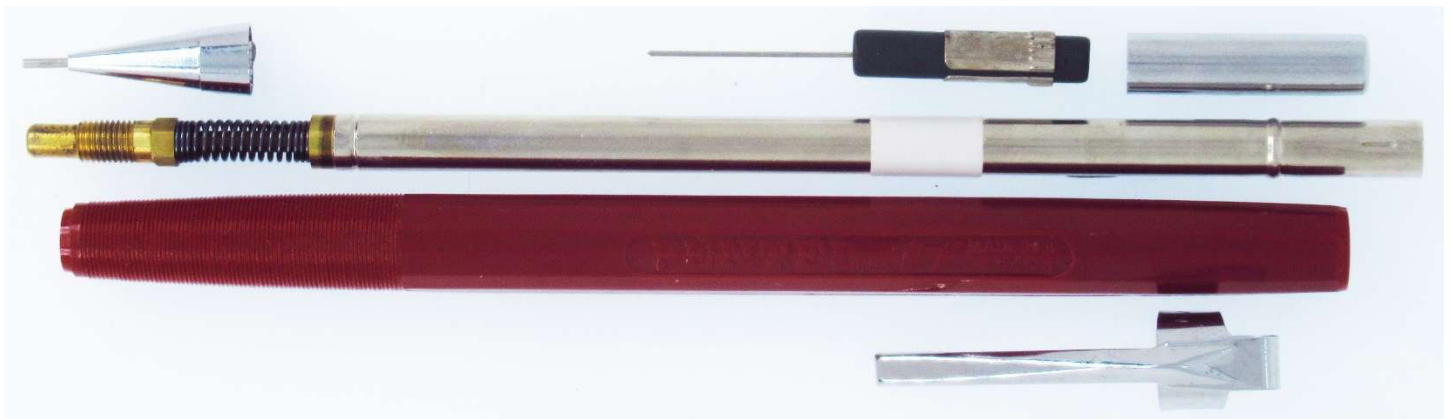

I own 2 Generation 4 pencils, both red 0.5mm pencils. Both read " PENTEL ELEVEN 11 MADE IN JAPAN B#", with mold marks B3 & B5.

The differences in this Generation are to the inside of the body and the inner reservoir.

Considering the difference in the inside of the body, it is unusual that Pentel kept the same outer molds but apparently changed the inside mold. The new design of the body allows the reservoir to drop into the back of the pencil (without having to screw it in) and is held in place by the tip. I believe that they may have used the interior mold of the P200 with the outer mold of the Pentel 11 to make these in 1970, but released them in 1971, when then were assembled.

One of the Generation 4 pencils I have came in the Pentel *CPA "Sharp 5" box that Pentel of America has used since the mid-60's for these.

Like most of these pencils, it breaks down into 6 components, the body, interior reservoir, eraser, tip, clip and cap.

Pentel Pencils Identification Book

Starting with the tip, it is now the standard 4mm pipe with 4mm threads that is used on the P205 and PG5 pencils.

The internal reservoir now has a front clutch assembly like the P200 series where it drops in and the hex locks into a molded 6-sided socket at the front of the body of the pencil. This makes assembly far faster and cheaper. There is also a white piece of plastic or mylar that slides along the reservoir. I believe this is to help keep the rattling down.

Again, it comes with the green Z2-1 eraser, and the cap is still the same straight cap with no indentations.

Pentel 11 Version 2, S300

I own the above 2 S305 pencils, both in 0.5mm. I believe these were also released in 0.7 and 0.9mm.

The only difference between these pencils and the above Generation 4 pencils is the text on the side, which reads "Pentel 0.5m/m S305 JAPAN B#" with my pencils having mold marks B2 & B4. The Pentel on the side is in the "new" modern logo, where all of the Version 1 pencils are in the older typeface font.

Pentel Pencils Identification Book

Generational Changes to the S55/S57/S59 Pencils

UPDATED from 2025.04

I have wanted to dig into the generational changes of many different pencils in the Pentel ID Book, but due to limitations I placed on the pages of this book, I could not do so in the front section of the book, so I decided to do so back in Appendix B. In this case, I wanted to look at the Pentel S55/S57/S59 pencils.

I believe what is now known as the S55 came out in 1966. This is based on a couple of data points. One is a Timeline that was used in an Orenz presentation that says the S5 came out in Showa 41 (1966). Another is based on two Japanese catalog one-sheets that have these pencils in them, but don't have absolute dates for them, just my best guess of 1966 & 1967, based on what other pencils are or aren't on them

Generation 1

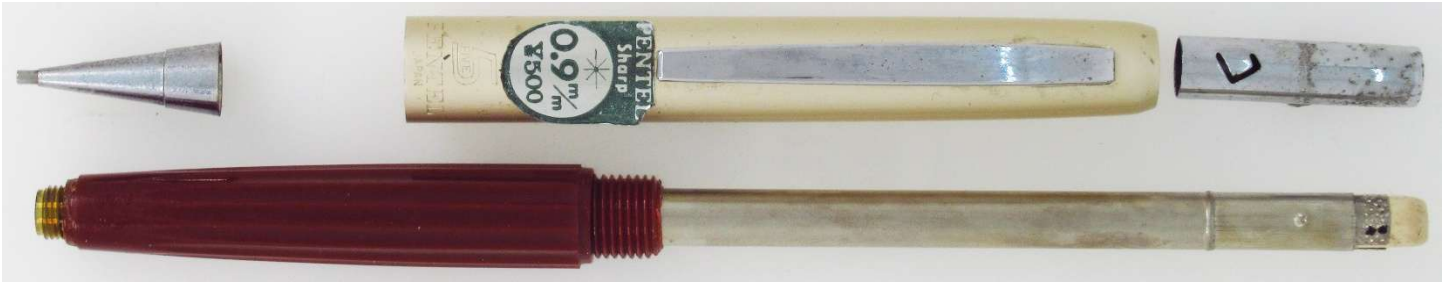

When first released these were simply called Sharp 5 pencils, abbreviated as S5. I believe that due to the 5 having FIVE within it, these eventually came to be called "Sharp 5 Five " or S55.

The above pencils are 0.5, 0.7 & 0.9 mm, but this is not indicated by the Number on the front, as at this point, they all had the "5" on them. Another indicator of size is the gold body on the 0.9 mm. I am not positive if all 0.9 mm from this generation had this color or not, but some later generations do.

Pentel Pencils Identification Book

Now let's look at the different components of this generation of pencil.

Inner Reservoir – I could not remove this from the grip after 60 years. This is a metal bodied full-size reservoir (as opposed to early-60's models that would hold 1-2 pieces of lead). On the back, it has a raised “shelf” that the bottom of the eraser cap would rest against. The front has a 5mm thread that screws into the grip and extends beyond for the tip to screw into as well. The clutch has 3 brass fingers with a collar that extends around it.

Grip – The early S5x grip had a heavier ridged grip than later S5x pencils. This was available in Black, Red, Maroon, Blue, Light Green and Gray. It had a 5mm thread at the front that the Inner Reservoir would screw into.

Eraser – These early pencils had a White eraser that was sourced from outside Pentel. I only have the original erasers on the 0.7 & 0.9mm. The 0.7mm came with a cleanout rod.

Tip – The tip appears to be the standard stepped tip with a 2mm pipe that is used by many of Pentel's pencils even up to today. The only difference is that these tips have a 5mm thread size, rather than the current 4mm.

Body – These bodies came in a variety of types. The top pencil from the previous page, and for that matter, all of the 0.5mm pencils of this generation that I own are a brushed metal body. The 0.7mm has a frosted surface, as does the 0.9mm, except it is in a yellow metal. I am not sure if this pattern follows on all S5x pencils of this era or not.

Eraser Cap – I have 2 examples of eraser caps from this generation. The one on the left below is like the one in the Component Breakdown shot above. The one on the right does not have a slot cut into the cap, it depends on a raised spot on the Inner Reservoir. Neither of the 0.7 or 0.9mm had size stamped in the top, but they both had the slot cut in them.

Pentel Pencils Identification Book

Generation 2

There are not a whole lot of changes, except for 1 major change that will be covered below. These pencils appear to have the same logo as the Generation 1 pencils. I do not own a 0.7 or 0.9mm of this Generation, so I do not know for sure that they are the same. The tags show that this Generation spanned across 1970 to 1971, since you can see the change in the Pentel font on the bottom sticker.

Looking at the Components, I will go over the changes that I see in this Generation of S5x pencils.

Inner Reservoir – The eraser end still has the shelf that stops the eraser cap, but now there is a raised spot that causes a friction fit with the cap. The front end is where the major change is for this Generation. The Reservoir still has a 5mm thread that screws into the Grip, but it now steps down to a 4mm thread that the tip screws into. Again, this still has the shielded clutch.

Grip – This grip appears to have a lower, more rounded grip than the Generation 1 pencils. It still has the 5mm threads at the front where the Inner Reservoir screws into it.

Eraser – This pencil now has the green Z2-1 eraser that is produced by Pentel.

Tip – This is the same tip as before, but now with the 4mm thread of modern pencils.

Pentel Pencils Identification Book

Body – The pencils I have all have the same brushed metal body with the same 5 Five logo.

Eraser Cap – This is the same smooth body eraser cap that uses the raised spot on the Reservoir to friction fit. The middle pencil above (with the Mustang logo) has the .5 stamped on the top, like the rightmost Eraser Cap in the Generation 1 photo.

Generation 3

I have only ever seen a picture of this pencil, but from what I see of the grip, logo and clip, it appears to be one of the first pencils post name change by Pentel. I don't believe that this was manufactured very long, and was more of an intermediate generation.

First off, from what I find, all Generation 4 and later pencils have a grip that is only Black (except for special edition pencils). The above pencil still has one of the colored grips of the previous generations. It does look to have the harder, sharper ridges of the Generation 1 pencil.

The body appears to be the brushed finish of the Generation 1 0.7mm above, and the clip matches previous generations, as opposed to the Generation 4 and later.

The logo is a big point that leads me to see this as a different, intermediate generation. The middle logo in the picture below, belongs to the pencil above. First off it has the new Pentel style name at the top, meaning that it was probably made about 1971 or later, like the one on the right. But looking at the "7", the style of it fits more with the previous logo on the left, being a thin number.

Pentel Pencils Identification Book

Generation 4

This set of pencils are probably the most commonly seen, since this style was used for Generation 4, and externally for Generation 6. Only when you look inside can you see which Generation this is. The pencils have all new logos from previous generations, and the clip has changed.

Now, to look at the components.

Internal Reservoir – This is still a metal lead reservoir (one of mine has a slightly thicker aluminum reservoir) that still has the shelf to stop the eraser cap. The front now has the hexagon stop, that drops into the grip from the rear, and the 4mm thread for the tip. Some of these pencils are now date stamped in a yymmdd format. The pencils I own are stamped between 770512 and 780416. The brass clutch now extends without the extra sleeve, making for easier cleaning.

Grip – This has the smoother, but still ridged, grip that will carry on until the pencil is discontinued. All of these pencils now have a black grip, except for special versions.

Pentel Pencils Identification Book

Eraser – The eraser is the standard green Z2-1 with a cleanout pin in the 0.5mm.

Tip – The same standard 2mm tip with the 4mm threads.

Body – This is the regular metal body with the new logos, and a new narrower clip with a scallop section at the top.

Eraser Cap – Straight eraser cap that friction fits on a raised section on the internal reservoir.

Generation 5 (Domestic)

At first I believed these were a 6th generation that Pentel went back to after the "5th generation" that had the printed text. But now I believe that this is the final generation of the S5x for the Japanese Domestic Market.

I believe this change came about in the late-70's or early-80's and the primary difference is the plastic reservoir body.

Internal Reservoir – This is where Pentel switched the Reservoir to plastic. This is the same reservoir that is used on the Generation 5 P200 series of pencils. This has a Date Code of 4L stamped on it.

Grip – This is the same grip that was used on Generation 4 for the drop-in Reservoir.

Eraser – This is the modern white Z2-1 eraser that came out around 1994. Earlier models would still have the green Z2-1 eraser.

Tip – The same tip in use since Generation 2 with the 2mm pipe and the 4mm thread.

Body – This is the same stamped body as the Generation 4 body. This does have a modern sticker on the back that does give us another clue to the timing of this pencil.

Pentel Pencils Identification Book

The “Yes” logo on the right dates to the late 1990’s, I believe (see the EA505 pencil from 1997 in this book). Along with the date stamp of 4L, I believe makes this a December 2004 manufacture date.

Eraser Cap – This is the same straight eraser cap but now has the indentation in the cap to friction fit against the plastic reservoir.

Generation 5 (Export)

These are the first S5x pencils that did not have a logo stamped into the pencil, but instead it is silkscreened on. The logo on the front has the size over Pentel and the back has the model over Japan. I have come to believe that these were only for the Export Market.

The components are the same as the Generation 5 (Domestic) with the body being different.

Internal Reservoir – This is the same reservoir as the Generation 5 (Domestic). The ones I have were stamped with the yymmdd between 780121 and 820125.

Eraser – Green Z2-1 Eraser

Body – First off, the new logo stands out, now being silkscreened on front and back. For the 0.7mm, the body now is anodized blue and the 0.9mm is again anodized yellow, like the original Generation 1 pencil.

Pentel Pencils Identification Book

Pentel Tags and Stickers

I decided to try to put together an article about the tags and stickers that Pentel used to identify and price their pencils, prior to barcodes, which started showing up in the late-90's or early-2000's.

For the first section, these will be more of the generic tags and stickers, with a few exceptions. The next section will be pencil specific tags and stickers.

I am including all the prices and variations that I have identified as of this writeup. Many of these stickers and tags are low resolution shots or are damaged, since I had to source them from the internet. Of course, as soon as I have published this, 5 to 10 more stickers and tags will show up. But this is a living, changing document anyway.

With changes between stickers (especially the triangle and square stickers), I don't expect that there was a hard and fast cut-off for changes. Pentel is known to keep using parts after a major change (see old typeface clips on new Pentel logo pencils), so for example, they may have changed the 0.5mm square variant 1 to variant 2 for the ¥1000 sticker months before they finally ran out and changed the ¥800 variant 1 sticker.

Thanks to haruca_st for help in dating the Triangular and Square stickers.

1960's Tags

Triangular Dragon Tag

The only place I have seen this tag is on the ML3.

The ¥300 tag is from a P305 and the ¥500 can be found on the P505, ML5, S55 and the PS535.

Mustang Tag

I have only found what I call the Mustang Tag on one Generation 2 S55.

Pentel Pencils Identification Book

イケイケ (Ike Ike) Tag

This tag was for a Drifters Ike Ike Doll promotion from 1970.

I have seen this tag on the P505, ML5 and S55.

1970's Triangular Stickers

Pre-JIS Triangular Sticker

These stickers were used from the early-1970's to 1975 with a couple of exceptions. One thing to note on these stickers is that the size is printed as ".#". There are some stickers that do not have a price on them, and there is some suspicion that these may have been intended for Export.

This sticker was only on the PS1042. Due to not being part of the JIS Specs, the 0.2 used a variation of this sticker up to the square sticker release.

Pentel Pencils Identification Book

I do not know why some of these stickers did not have a price on them, but listed Japan instead. Possibly for sale outside of Japan where the Yen is not used?

The ¥500 sticker is from a P533, the ¥1200 from an SV and the Japan sticker is from a PMG.

These stickers came from a variety of pencils as can be seen by the wide array of prices (and not).

This sticker came from a Black P327.

This sticker is from a Yellow P329.

The following sticker is an oddball that I have found to be only on 1 specific model. This is a 0.5 mm with a tan background instead of red.

This is from a PD1065 Technica II.

The odd thing is that there are PD1065 pencils out there with the red sticker as well, so we don't really know the significance of this alternate color.

JIS Triangular Sticker (ぺんてる)

These stickers began to be used about December 1975 up to about 1977 when they switched back to English Pentel.

These are from models P533, SV and PMG.

Pentel Pencils Identification Book

These are from a several different models.

This is from an P327.

This is from a later model of the Unknown Model 12.

Again, there is this one-off 0.5mm sticker with a tan background instead of the normal red.

It also only comes from the PD1065 Technica II. We are not sure why this sticker has a different color, since the PD1065 also had the normal red background stickers.

JIS Triangular Sticker (Pentel)

Pentel switched back to the English Pentel in 1977 up to about 1980. These stickers now printed the size with a leading zero.

0.2mm and 0.4mm were not represented in the JIS stickers, since they were not part of the JIS specifications, but there are ones printed during this period that I will show.

This sticker does not include the JIS information due to 0.2 not being part of the JIS standard, but you can see that it is part of this range of stickers due to the leading zero. It is from a PS1042.

Pentel Pencils Identification Book

This sticker is from a P323.

This is from a PG4. The PG4 came out in 1976 and should have had the JIS version of this sticker, but the 0.2mm and 0.4mm were not part of the JIS specs, so these sizes continued to use the Pre-JIS format up until the square stickers came out.

These are from a variety of different models.

These come from P327 and an S57 model.

The first comes from a P329 and the last is from the Unknown Model 12.

Square Stickers

There were 3 different variations that we will cover.

Variation 1 – JIS without Permit Number

These started being used from about 1980 to 1986.

Since this still has the JIS logo, the 0.2 and 0.4 do not exist in this variation.

These are from models P323, PG1003 and SV.

Pentel Pencils Identification Book

These stickers come from P105, P325, SV5, PWP15, PG1505 and the PN3015.

These two stickers come from a P327 and an S57.

P329 and S59 stickers.

Variation 2 – JIS with Permit Number

This variation was used from about 1986 to 1998.

Again the 0.2mm does not appear in this variation due to not being in the JIS specs.

These are from models P323, PG1003, PMG and PG2003.

Technically, this is not a Variation 2 sticker, considering that it does not have the JIS logo nor permit, but it was printed at the same time as some other PG1000 Graph 1000 pencils, and is thus left justified, so I decided to include it here rather than in the Variation 3 section where they are all centered.

As stated above, this came from a PG1004.

These came from models PD335, PG5, P115A and PG1505.

Pentel Pencils Identification Book

When talking about the JIS stickers with permit numbers, I did not explicitly state the permit number of 375127, which is Pentel's JIS permit. I go into this now because this next sticker for some reason has a different permit number (379211, followed by a circled S). I only learned about this from Twitter recently, and then found that I own a pencil with this unique permit number.

The two instances that this has been spotted are on P1035 Kerry's. Mine has a 5-digit date code of 80122, probably being January 22, 1988.

These are from models PG7 and Q1007.

These are from a P329 and Q1009.

Variation 3 – No Logo or Permit

Since this sticker does not have the logo nor permit number, Pentel moved the size to the center of the bottom section. These were in use from about 1998 until replaced by the Barcode Stickers.

I have fewer versions of this variation and don't have a 0.3mm sticker.

PS1042 sticker that was the only variation used.

PG4 sticker.

This is from an S55 after Pentel reverted the price from ¥700 back to ¥500.

Pentel Pencils Identification Book

P327 Sticker.

This sticker is from a rarely seen PF509.

Variation 4 – 替芯付 (With Replacement Core)

This rectangular sticker is technically a variation of the square stickers, but for packaged items that came with replacement lead.

These fall under the 3 variations above (JIS No Permit, JIS with Permit and No Logo), but since I have so few examples, I am grouping them together.

This is from a packaged PG2.

This is from a packaged PG2003.

Pentel Pencils Identification Book

These are from packaged PG4, P154 and PG1804.

This is from a packaged PG5.

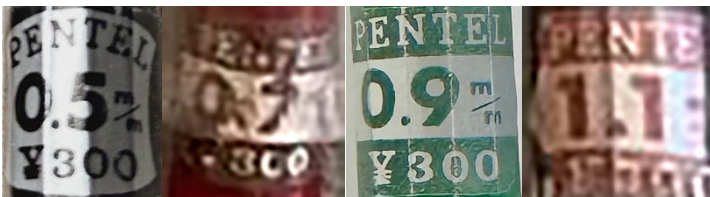

This is from a packaged PG7.

Item Specific Tags and Stickers

Now we come to tags and stickers that come from specific models.

This is from a Pentel 111 from the 1960's, one of the very few 1.1mm pencils from Pentel.

These are various size stickers for the Pentel Sharp 11 from the 1960's. I am not sure why the 0.5mm is different from the others or if there was a 0.5mm like the others.

These are the first stickers used on the original S55 pencils. All of the pencil bodies were stamped with the '5' logo, even though they were of various lead diameters.

Pentel Pencils Identification Book

This tag was on a later S55.

This sticker was used on both versions of the Hi-Black.

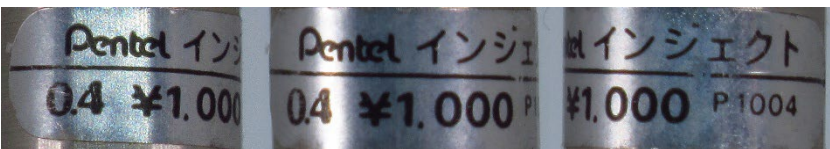

I believe that this tag (and the ones to follow) was used on the export versions of the ML5 from about 1978 to 1980.

These tags are the S5x stickers that were used from about 1978 to 1980 on the export versions.

This is the PS535 version of the above export stickers.

This is the wrap-around sticker from the P1004 Injecto.

This is the P1085 sticker that was produced in Taiwan.

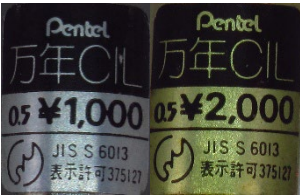

Pentel Pencils Identification Book

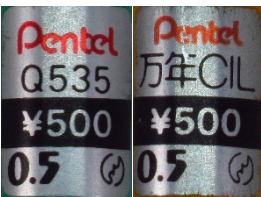

These are 2 variations of the P245 (Type 1) stickers.

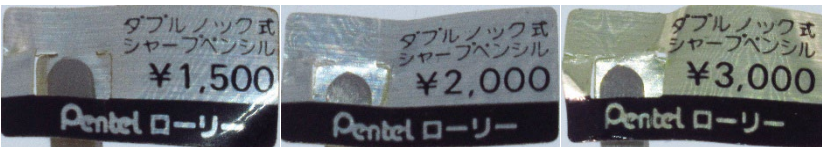

This is the tag from the P300 Big Pencil.

These are the stickers used on the P1135 and P2135 Kerry pencils.

Two variations of the Q535 Kerry stickers.

These are the tags used on the Rolly Double Knock pencils. The ¥1500 was for the PC125, the ¥2000 was used for the PC205 and PC215, with the ¥3000 being for the PC305 & PC315.

This sticker was used on the PD335 Pop'npop.

This is the sticker from the PD1055 Technica. It wrapped completely around the pencil.

Pentel Pencils Identification Book

This is the sticker from the Generation 1 and early Generation 2 PN105 Technoclic pencils.

These tags are from the Excalibur pencils. The ¥10000 was from the silver plated PXE105, the ¥15000 from the silver with gold accent PXE155 and the ¥20000 from the gold filled PXE205.

These are from the Excalibur Technomatic pencils. The ¥10000 from the silver plated PXN105 and the ¥20000 from the gold filled PXN205.

I have only found this on the early Q1003 Smash pencil.

And last is the Disney sticker from the P565 Set 1.
